Historic Preservation Master Plan
for
Asheville and Buncombe County, North Carolina

Historic Resources Commission
of Asheville and Buncombe County

March, 2015
A Special Thank You to the Citizens of Asheville and Buncombe County:

I would like to thank everyone who has worked on and contributed in many different ways to the Preservation Master Plan for Asheville and Buncombe County. It has truly been a team effort.

Because of this hard work, Asheville now has a visionary document that will enable the Historic Resources Commission to continue its proud tradition of leading our community in the lasting duty to honor and protect the many contributions of generations past and present. Millions of dollars and thousands of hours of hard work have gone into making Asheville and Buncombe County wonderful places to live. This is our plan to make historic preservation vital to the continued evolution of our communities and neighborhoods to insure they are as livable, vibrant and sustainable as possible.

We would be amiss if we didn't give a special thank you to the Director of the Historic Resources Commission of Asheville and Buncombe County (HRC) and our tireless leader, Stacy Merten. Stacy, who has served as the director of the HRC since 2002, is one of the most dedicated and hard working individuals I have ever had the pleasure of working with. She was not only instrumental in making the master plan project a reality, she has been the driving force that has led this plan to completion.

Sincerely,

Brendan Ross
Chair, Historic Resources Commission
and Master Plan Advisory Committee Chair

INTRODUCTION

Asheville and Buncombe County possess a historical legacy of considerable value to the region’s economy and quality of life as the region grows in the 21st century.

This plan describes that legacy and the progress made in caring for it to date. It furthermore asks the region’s leaders, organizations, business owners, and residents to focus on the ways in which they can nurture this legacy. In the years ahead, through the careful practice of historic preservation in its broadest sense, this legacy can continue as a long-term asset for community-building and sustainability.

In 1979, Asheville and Buncombe County established the Historic Resources Commission of Asheville and Buncombe County (the HRC). That decision took place at a turning point for Asheville, in particular.

Nationally, the growing movement for historic preservation had recently gained a new tool, the historic rehabilitation tax credit. Locally, in 1981, city voters turned down a bond referendum that would have provided funds to demolish eleven blocks of the downtown for replacement by a downtown mall larger than the Asheville Mall. The 2-to-1 vote was an affirmation of the value of Asheville’s historic commercial core, even before conditions were ripe for millions of dollars of investment in revitalization.

Over the past thirty-five years, the HRC and city and county elected leaders, other agencies, community organizations, property owners, and developers have addressed many opportunities for preserving and building upon the region’s legacy.

It is clear that much has been accomplished, as delineated in the following chapters. The HRC’s work over many years has laid a strong foundation for this plan. Thanks in large measure to historic preservation throughout Asheville, property values have increased, the business community has expanded, neighborhoods have stabilized, and tourism has steadily grown. Both historic district architectural review and
A Vision for Historic Preservation

This Historic Preservation Master Plan reflects a vision of Asheville and Buncombe County as a place that celebrates and cares for its history and both natural and built landscapes. In this vision, historic places are widely viewed as settings and sources of inspiration that foster a community-oriented, high quality of life. Historic preservation is valued as a sound practice, and as part of the region’s success. It helps to sustain neighborhoods, commercial areas, and the countryside. It also supports community and economic development, including affordable housing, tourism, and artistic and cultural enterprises, and community sustainability as a whole.

The vision of success for historic preservation includes:

Broad public outreach:
Articulate historic preservation’s value to community-building, sustainability, economic development, tourism, and the arts.

Sharing history: Through interpretive presentation and education, insure broad understanding and appreciation of the region's history.

Best practices: Focus on best practices across the wide array of programs that support historic preservation, from the HRC’s technical preservation responsibilities to community planning, communications, the arts, tourism, and interpretive presentation.

historic tax credit projects have helped to achieve such results, especially since the availability of tax credits has expanded with National Register recognition in more commercial districts – River Arts, West Asheville, and additional Downtown buildings. Even though the state tax credit expired at the end of 2014, the federal credit lives on as a still-considerable stimulus for private investment in the rehabilitation of recognized historic buildings.

Over the next thirty-five years, the practice of historic preservation continues to offer much of value as Asheville and Buncombe County enter a new period of growth. Nearly every important community placemaking decision – whether public or private, whether created by capital investment, incentive, or regulation – is an opportunity to use the region’s architectural and historic legacy as a resource in building a sustainable 21st century community. In the process, we will make clear what we mean by “broad” historic preservation.

WHY PRESERVE?

Why should Asheville and Buncombe County pursue an improved set of strategies for the practice of historic preservation? The benefits are clear, and considerable. They fall into four basic categories: economic, tourism and placemaking, community-building, and environmental. Let’s take each of these in turn.

Economic Benefits

Historic preservation is a high-value economic activity. A 2010 report out of Pittsburgh states this succinctly: “preservation is a major driver of jobs, investment, tax revenue, and businesses. Most importantly, it creates jobs that cannot be outsourced, keeping talent and dollars local.”

A study by Rutgers University’s Center for Urban Policy Research in 2010 showed that in Kansas, each million invested in historic rehabilitation produced 16.4 jobs, whereas electrical machinery produced 11.8, wheat farming 2.6, auto manufacturing 5.3, and telecommunication services 4.4 jobs. State and local taxes collected were equally dramatic – for every $1 million, rehab produced $39,000 in state and local taxes, whereas electrical machinery yielded $14,000, wheat farming...
$29,000, auto manufacturing $12,000, and telecommunication services $26,000. Compared to new construction, rehabilitation of historic commercial structures is also high-yield. Again in Kansas, while rehab produces 16.4 jobs, $1 million invested in single-family or multifamily homes creates 11 jobs; nonresidential, highway, and civic/institutional construction yielded 11.7, 9.9, and 11.3 jobs respectively. State and local tax comparisons are similar — $39,000 for rehab, and just $21,000 to $23,000 for $1 million invested in other forms of construction.

Numbers across the nation suggest that North Carolina’s, and Asheville’s, experience would be found to be similar. According to the National Trust, “Over three-quarters of the economic benefits generated by rehabilitation remains in the local communities and states where the projects are located. This reflects the fact that the labor and materials for historic rehabilitations tend to be hired or purchased locally.”

In Asheville, the city needed to make the most of its scarce resources to recover from its long struggle to come back from its 1930 economic crash. The 1977 payoff of the city’s debt was soon followed by the nation’s economic difficulties beginning in 1980. Historic buildings were under-utilized assets whose discovery and rehabilitation gave new economic life to downtown and Biltmore Village at this critical time. Later, the same process of leveraging underutilized buildings in the River Arts District and West Asheville led to more private investment and economic success.

From 1979 to 2014, more than 173 income-producing buildings and more than a hundred homes have been rehabilitated and qualified for historic tax credits in Buncombe County. Since the federal historic tax credit program began in 1976 and the state program in 1998, sixty-eight contributing historic buildings in the Downtown Asheville National Register Historic District have been rehabilitated according to the Secretary of the Interior’s Guidelines, at a reported value of nearly $142 million in 2014 dollars.
Tourism and Placemaking Benefits

Historic buildings are integral to an excellent Asheville visitor experience. They reinforce Asheville’s unique sense of place and the city’s lovingly maintained historic architecture expresses the region’s artistic spirit. Taking care of existing city fabric to the highest standards is an act of creative placemaking.

Moreover, the formal review process enabled by historic districts (described later in this plan) offers an unrivaled method for encouraging compatible infill that respects a creative past and present. Biltmore Village presents an excellent case study for how to manage a commercial historic district with significant amounts of new construction.

Sustainability and Community-Building Benefits

Preservation creates usable commercial space and upgraded residential structures, stabilizes neighborhoods, and increases property values. It supports unique commercial environments sustaining a dynamic business community, including small businesses and start-ups. Because of tax credits for historic rehab (called “HTCs” in North Carolina), historic preservation attracts private investment leveraged by targeted tax credits. That is, federal and state government foot part of the bill for rehab and private investors do the rest; the local cost involves planning and regulation, not direct financial investment.

Historic preservation can also enable affordable housing. A 2010 study by Rutgers University of nationwide trends in the use of the HTC found that “the majority of investments are taking place in low-income neighborhoods where investment is needed the most.”

A less measurable but valuable benefit is that the act of preservation respects the legacy and hard work of those who worked to build their communities. Preserved historic buildings provide a sense of place, context and enjoyment, continuity and memory – they provide a sense of lasting value and accomplishment critical to sense of community.

Environmental Benefits

Preserving old buildings conserves resources and uses existing public investments in infrastructure from sewers to parks. Well-preserved communities attract development that might otherwise occur in the countryside. Investment in older neighborhoods is an investment in inherently sustainable communities that are generally dense, walkable, transit-accessible, and mixed-use.
Overview

Asheville's and Buncombe County's Geographic Context

Asheville is centrally located within Buncombe County at the confluence of the French Broad and Swannanoa Rivers, high in the Mississippi watershed in Western North Carolina. The county is centered in a high plateau bordered by the Blue Ridge, Great Craggies and Black Mountains to the east and the Great Smokies to the west.

Buncombe County was part of the Cherokee Nation's hunting grounds before white settlers arrived in the Swannanoa Valley in 1784. It was officially established in 1792. A year later, a settlement originally called Morristown was established, renamed Asheville in 1797 in honor of Governor Samuel Ashe.

Asheville and Buncombe County have developed as a destination for leisure, recreation, and wellness since the long-gone Eagle Hotel opened in 1814. The completion of the Buncombe Turnpike in 1827, tracing the French Broad River to East Tennessee, brought the first major influx of visitors to Asheville. Wagons of settlers headed west through the region, while drovers from Tennessee and Kentucky moved herds of cattle, sheep, hogs, and turkeys to South Carolina's population centers. Completion of the Plank Road to Greenville in 1852 stimulated further growth. The city's reputation as a health resort.

Community-wide, preserving older buildings is greener than any other method of community development. As architect Carl Elefante first stated this principle, “The greenest building is the one already built.” A study for the Department of Defense (DoD), for example, found that “modernization of DoD’s pre-war [II] masonry buildings can be significantly less expensive than new construction...By leveraging original design features for thermal comfort (“original design intelligence”) with new, energy-efficient buildings systems, DoD can modernize pre-war buildings to match the energy performance of new construction.”

Rutgers University also found in its 2010 study that “the amount of energy involved with new construction results in negative environmental impacts; namely for the production of new building materials. Historic rehabilitation ordinarily does not require new infrastructure such as roads and utilities, reduces the amount of waste deposited in landfills, and often involves properties near existing transit so that building occupants use less fuel and generate less pollution than those living and working in sprawl locations. Studies show that reusing a 5,000-square-foot building conserves the amount of carbon equivalent to what 85 homes burn in an entire year. The reuse of a 100,000-square-foot building saves the amount of carbon produced by nearly 1,600 homes in one year.”

The Process for Developing This Plan

This plan was designed to establish goals and recommended actions. The project area includes both Asheville and Buncombe County. The planning process has been led by the joint city-county HRC.

This is Asheville’s and Buncombe County’s first community-wide historic preservation plan to guide future program development and decision-making.

(Continued on page 6)
The Request for Proposals to develop this plan, issued by the HRC at the end of August, 2013, asked for the following products; many of these statements indicate issues that were later identified in further conversations with stakeholders:

- Development of goals, strategies and an overall vision for historic preservation in Asheville.
- Recommendations for:
  - Preservation of resources in the unincorporated areas of Buncombe County.
  - Preservation of infrastructure outside of local historic districts.
  - Working with disadvantaged property owners in the existing local districts.
  - Better integrating historic preservation with environmental and sustainability goals and procedures.
  - Integrating historic preservation with the goals of the artistic community.
  - Marketing, promotion, and education of the historic preservation program.
  - How to better incorporate historic preservation goals into the overall planning process.
  - Other tools and strategies for improving the quality of preservation effort, especially in the downtown area.
- A review of the current inventory of historic resources, documenting more than 4,400 properties.
- A field review in order to identify “areas that should be studied further for potential local or national historic district designation or other design regulation.”
- Criteria for adding, expanding, or re-surveying historic districts.
- Recommended methods of protection of historic structures, neighborhoods, and open spaces.

Heritage Strategies, LLC, was chosen as the consulting team. To advise the process, the HRC established an Advisory Committee, including both Commission members and other residents; held public workshops; and recruited four groups of stakeholders focusing on commercial districts, historic neighborhood character and quality of life, public outreach and interpretation, and Buncombe County’s rural places.

The public participation process designed for this project subscribes to the collaborative level as identified in the city-adopted guideline “IAP2 Spectrum of Public Participation” (2007; International Association for Public Participation).

The first public workshop, held on November 21, 2013, introduced the project. During this visit to Asheville the consulting team also toured the city and county and met with members of city departments and others whose work affects historic resources.

On January 29 and 30, 2014, the consultants held a second public workshop and a first round of meetings with the four focus groups, followed by a meeting with the Advisory Committee on January 31.

A second round of meetings with the focus groups, the public, and the Advisory Committee discussed the consulting team’s findings, March 18-21. The week also
included an evening reception of the Western North Carolina Heritage Association on March 18 and the two-day arts summit (“Creating Economic Vitality through Arts & Tourism”) hosted by the Asheville Area Arts Council on March 20 and 21.

Following the team’s production of a rough written draft of this plan, focused discussions with city staff and others took place on May 27 and 28. Interviewees included representatives of the Asheville CVB to discuss heritage tourism; staff of the Asheville Design Center to discuss neighborhood outreach; the State Historic Preservation Office staff to discuss historic preservation; representatives of the Southern Appalachian Highlands Conservancy, Buncombe County Planning Department, and the Buncombe County Soil and Water Conservation District to discuss Buncombe County farming and historic resource surveys; city staff to discuss planning issues in commercial districts and neighborhoods; and Angie Chandler and Becky Anderson to discuss the Blue Ridge National Heritage Area, and in Ms. Anderson’s case, her memories of early work for the city in revitalizing the downtown.

The consulting team has since completed several drafts of the plan. The Advisory Committee met on July 8 to review the first draft with the consulting team, which then presented it to the HRC at its regular meeting on July 9. The Design Review Subcommittee of the Downtown Commission met on July 30 to discuss portions of Chapter 6 pertaining specifically to the Downtown; the consulting team participated by phone. A second draft formed the basis for presentation by the consulting team to the Planning & Zoning Commission on August 6 and by the HRC director to the Downtown Commission on August 8. The HRC director presented a third draft to the Planning and Economic Development Subcommittee of the City Council on August 19. The HRC director continued to work with the Advisory Committee, the Landmark and Education Subcommittees of the HRC, the Downtown Commission, and other city staff in the fall of 2014 to refine the implementation strategies prior to taking the plan forward for a final recommendation by the HRC, Downtown Commission, Planning and Zoning Commission, and the Planning and Economic Development Commission in anticipation of acceptance by the Asheville City Council and Buncombe County Board of Commissioners.

GOALS FOR HISTORIC PRESERVATION

The vision for accomplishing historic preservation in Asheville and Buncombe County appears page 2. It was written by the consulting team following the third round of meetings. The following four goals express ways to achieve the vision:

♦ Heighten public appreciation of Asheville and Buncombe County’s heritage and historic resources.

♦ Ensure that public sector initiatives and actions are models for best practices in the preservation and treatment of historic resources.

♦ Support private initiative as a major way through which historic resources are recognized, preserved, and enhanced.

♦ Enlist historic preservation in the quest for great 21st century growth – make historic preservation central to Asheville and Buncombe County’s understanding of the ways and means of achieving a high quality of life and economic and environmental sustainability.

These goals are the ultimate measure of the success of this plan. Every strategy and recommendation presented in Chapters 2 through 9 should help in specific ways to realize at least one of these goals.

(Continued from page 6)

Guastavino (tiles of St. Lawrence Basilica), Frederick Law Olmsted, Sr. (Biltmore), Richard Sharp Smith (Biltmore and many buildings in Montford and elsewhere), Douglas D. Ellington (City Building and many more), and John Nolen (Asheville City Plan, 1922).

Asheville’s real estate boom came to an abrupt halt with the Great Depression. With the highest per capita debt of any city in the country, Asheville vowed to repay every cent and so struggled forward until 1977 when all bonds were paid. The city’s turnaround began shortly thereafter.

Today Asheville is the regional center of Western North Carolina. Buncombe County boasts a population of nearly 245,000, and Asheville itself has reached almost 85,000. The city boasts more than 29,000 businesses, the University of North Carolina at Asheville, good interstate access, a regional airport, and a thriving downtown with historic buildings, galleries, museums, restaurants, bistros, clubs, and shops. The region has an international reputation as a haven for the arts and progressive thinking and a tourism industry hosting more than nine million visitors per year, of which 3.1 million stay overnight.
12 Economic Benefits of Historic Preservation

The National Trust for Historic Preservation offers the following short list of the benefits of historic preservation:

1. Rehab Costs Are Roughly the Same as Building New
2. Creates Jobs
3. Increases Property Values
4. Conserves Resources
5. Uses Existing Public Investments
6. Supports Small Business
7. Revitalizes Main Street
8. Attracts Investment
9. Attracts Visitors
10. Prevents Sprawl
11. Creates Affordable Housing
12. Is Good Economic Development

CHAPTER 2

HISTORIC PRESERVATION CONTEXT

INTRODUCTION

This chapter describes the existing system for historic preservation in Asheville and Buncombe County, focusing largely on the work of the Historic Resources Commission of Asheville and Buncombe County (the HRC) and related public and private programs.

As noted in Chapter 1, this is Asheville’s and Buncombe County’s first community-wide historic preservation plan to guide future program development and decision-making. It applies largely to the HRC, but is expected to enable the HRC to enlist all programs and organizations that can contribute to historic preservation in either jurisdiction.

THE HISTORIC RESOURCES COMMISSION OF ASHEVILLE AND BUNCOMBE COUNTY

The HRC has been in existence for thirty-five years, since the city and county created the commission in 1979 pursuant to state enabling legislation passed in 1971.

Twelve volunteers serve on the commission, six appointed by each jurisdiction. (Commissioners residing in the city are both city and county residents.) All members have equal voting rights and serve three-year terms, limited to two consecutive terms. The HRC is further described on the city’s website.
The Future of Growth in Asheville and Buncombe County

The last time Asheville saw anything like the pace of growth it will experience in the next twenty years was during the explosive decade of the 1920s, when the population nearly doubled to more than 50,000.

The demand for development that the next wave of population growth will stimulate goes well beyond housing – commercial and industrial areas will also grow. The region’s accommodations and attractions must also respond to regional and national tourism demand stimulated by changing population and leisure patterns. At least seven hotels with a total of approximately 1,000 rooms are slated to be built downtown in the next two years, and other construction projects are lining up.

The State of North Carolina projects population growth as follows: By 2020, Buncombe County is projected to grow by approximately 31,000 people, and by 2030, another increase of 30,000 is expected. From a population base of more than 238,000 in the U.S. Census of 2010, the county will grow by about one-third to more than 313,000 by 2034.

Currently, Asheville’s share of the county’s population is about 85,000. If the projected growth is accurate (it was low in the projection (Continued on page 11)), the future of growth is accurate (it was low in the projection (Continued on page 11))

The HRC’s mission is to preserve and protect the cultural and architectural resources of Asheville and Buncombe County. As is true of many communities across the country, execution of the historic preservation program is implied in the state enabling legislation and does not require a plan, although one is encouraged, specifically enabled to be included in the community’s comprehensive plan. The HRC’s historic preservation program is typical of many across the nation in other ways as well. It includes historic resource surveys, National Register nominations, local historic district designations, architectural guidelines for alterations to old buildings and for new construction in local districts, and a Certificate of Appropriateness (CA) review process ensuring that property owners follow the guidelines.

Additionally, the HRC serves as an educational resource providing technical assistance and general information on the process and benefits of historic preservation to area residents and property owners.

Asheville currently has four locally designated historic districts: Albemarle Park, Biltmore Village, Montford, and St. Dunstan’s. The first three are also listed in the National Register. The HRC also has purview over a total of forty-seven local historic landmarks. Seven are outside the city limits in Buncombe County; another eleven are located in downtown Asheville; and the others are spread throughout the city.

The primary activities of the HRC revolve around review of CA applications for alteration, demolition, or new construction of structures or landscape features within designated local historic districts or to designated local landmarks. The staff may approve “minor works,” while “major works” require review and approval by the HRC. Under state law, the HRC is “quasi-judicial,” meaning that “when a preservation commission” makes a decision regarding an application for a Certificate of Appropriateness, it will swear in witnesses, hear testimony, and adjudicate on the application.”

Owners of locally designated landmarks are eligible to apply annually for a 50 percent property tax deferral as long as the property’s important historic features are maintained. For a building to receive local landmark designation, the HRC must rule that a building is “significant in terms of its special historical, architectural or cultural significance; and that the structure does possess integrity of design, setting, workmanship, materials, feeling, and/or association.” The local government elected body (city council, county commission) makes the final decision.

The local landmark program has been successful in recognizing and protecting properties of special historical significance to the community. The criteria for landmark designation, however, which are set by North Carolina state statute, can be somewhat limiting. In some instances it might be beneficial to recognize properties that were significant in the development of the region and continue to help define its unique character, but which do not meet the strict criteria for designation as a local landmark. The goals of such “notable property” designation would be to increase public awareness and appreciation of the region’s architectural and cultural resources as a physical link the past, to stimulate and enhance heritage tourism and economic development, to educate the community in the philosophy and purpose of historic preservation, and to encourage public and private preservation efforts.

The HRC’s staff consists of one full-time urban planner and one part-time preservation specialist. Buncombe County has contributed between $4,500 and $5,000 annually in recent years, and the city, grants, and Commission fundraising make up the rest of the HRC’s budget, approximately $124,800 for 2014 including $8,400 generated from development review fees and book sales. The HRC became a Certified Local Government under federal and state law in 1987, and has competed well for state grants available only to CLGs (see below).
Other sources of support for the HRC’s work have been mitigation funds for Section 106 agreements supported by the State Historic Preservation Office, the HRC, and other parties to such consultations. Mitigation funding from the renovation of Pack Square, for example, recently supported a major upgrade to city-wide survey information on more than 4,400 structures. The HRC also raises a modest amount of funding from sales of the 2009 reprint of *Cabins & Castles*, and will similarly benefit from recent publication of an Arcadia Books project illustrating the history of Albemarle Park, co-authored by HRC director Stacy Merten.

**Certified Local Government Program**

In 1980, Congress amended the 1966 National Historic Preservation Act to require each state to establish a procedure to allow local governments to participate in the national framework of historic preservation programs, including at least ten percent of the state’s share of the federal Historic Preservation Fund. This requirement has become known as the “Certified Local Government” (CLG) program.

The HRC achieved CLG status on January 7, 1987, among the first fifteen in the state to be so recognized during the program’s first two years. Today, the HRC is one among forty-seven CLGs (serving sixty-nine jurisdictions) in North Carolina.

In addition to special funding, CLGs have access to expert technical advice of the State Historic Preservation Office, the National Park Service (NPS), and other networks, including the National Alliance of Preservation Commissions. CLGs are also generally parties to Section 106 reviews by the State Historic Preservation Office (so named for the section of the 1966 federal law mandating review of federal actions affecting historic resources listed in or eligible for the National Register – see below). Depending on arrangement with the State Historic Preservation Office, CLGs may also take the lead in Section 106 reviews locally.

North Carolina’s federal 2014 CLG grants, estimated to total between $80,000 and $90,000, cover architectural and archaeological surveys, nominations of eligible districts and properties to the National Register of Historic Places, survey publication manuscripts, local preservation design guidelines and preservation plans, educational programs, and restoration of National Register properties. Funds for restoration are limited. Grant awards may cover up to sixty per cent of total project costs (local matching funds must cover at least forty per cent) and generally range from $1,500 to $15,000. Eligible applicants are local governments, local historic preservation commissions, nonprofit organizations, and educational institutions.

**Preserve America Community Designation**

Preserve America is a national initiative in cooperation with the Advisory Council on Historic Preservation; the U.S. Departments of Defense, Interior, Agriculture, Commerce, Housing and Urban Development, Transportation, and Education; the National Endowment for the Humanities; the President’s Committee on the Arts and Humanities; and the President’s Council on Environmental Quality. Communities may apply for special designation as a Preserve America Community, which recognizes communities that:

◆ Protect and celebrate their heritage;
◆ Use their historic assets for economic development and community revitalization; and
◆ Encourage people to experience and appreciate local historic resources through education and heritage tourism programs.
Benefits of designation include White House recognition; a Preserve America Community road sign; eligibility for Preserve America grants; authorization to use the Preserve America logo on signs, flags, banners, and promotional materials; and listing in a web-based Preserve America Community directory.

Asheville and Buncombe County was recognized in 2009. Unfortunately, at this time, Congress has discontinued appropriations for grants, but the program continues to provide recognition and a web presence. (To see Asheville's listing, see http://www.preserveamerica.gov/ncashville.html.)

OTHER LOCAL GOVERNMENTAL AGENCIES

The actions of other local government agencies also can affect historic resources. From public works to permitting to planning in general, the best practice within local government is to consider how to achieve historic preservation directly through all relevant agencies. This could, for example, mean a procedure for consultation with the HRC at the earliest opportunity – earthmoving can affect archeological resources, for example, and the HRC can help identify avoidance or mitigation steps. Or it could mean aligning all agencies’ missions through a policy statement or comprehensive plan. The city, for example, addresses historic preservation through its adopted comprehensive and downtown master plans, available from the Department of Planning and Urban Design. This master plan is intended as an added chapter of the comprehensive plans for both jurisdictions, as enabled under state law and following normal public review processes.

OTHER LOCAL PARTNERS

Historic preservation is hardly confined to local government. The Preservation Society of Asheville and Buncombe County (PSABC) and Preservation North Carolina (PNC), both established in the 1970s, are critical nonprofit partners devoted to the values and goals of historic preservation. They have standing programs for preservation advocacy, the education of property owners and the public, and direct preservation action through real estate transactions, including revolving funds and preservation easements or covenants. Interestingly, the state enabling legislation that allows local governments to establish “preservation

(Continued from page 11)

Or ill-planned neighborhood growth could create quality-of-life headaches, and demand for housing could outstrip affordability. Without careful planning and investment, growth may bring higher property values – more income for the city – but also more costs in terms of more traffic, more crowding, more services, and more conflict over development.

But this growth could be good news, instead, if its energy is channeled well. Old buildings can be repurposed, saving instead of throwing away existing materials. Old houses can be rehabilitated and compatible, affordable new housing can be built on vacant lots, helping to stabilize more neighborhoods with more investment. More people can help pay the bills for the same infrastructure, and support local businesses. Demand for more housing can add even more residential life to the city’s commercial areas, in under-used upper stories of downtown’s existing buildings and in more new housing constructed in appropriate areas (for example, next to the downtown, and in South Side and the River Arts District).

This plan is written in the belief that the practice of historic preservation can make a vital contribution in bringing to life such a positive vision for Asheville’s future growth.
In 2016, PSABC will celebrate forty years of service to Asheville’s community. Like so many other local preservation nonprofits across the nation, PSABC developed out of a sense of threatened loss of Asheville’s historic built environment. Upon its founding in 1976, the organization immediately identified several endangered landmarks for attention. A year later, PSABC began a volunteer survey of downtown, laying the groundwork for what is now the National Register historic district. In 1978, the Gudger House at the head of Montford Avenue was donated to PSABC; hours of PSABC volunteers’ labor secured the property’s future. Pisgah Legal Services later bought the Gudger House; it remained its headquarters for nearly three decades and ushered in a renaissance of this long-deteriorated neighborhood. PSABC’s focus on neighborhood recognition and protection led to the Montford National Register district and by 1980, “Heritage Week” (now preservation month, May) and a popular preservation awards program (the Griffin Awards) were in place. Often undaunted by the scope of many preservation challenges, this largely volunteer organization has undertaken several monumental projects, such as saving The Manor on Charlotte Street and the relocation of Richmond Hill, one of the largest structures ever moved in North Carolina. It formally protects more than a dozen properties with easements or protective covenants (see sidebar on page 36).

“While experiencing both success and failure over that time, PSABC is proud to have been involved in countless advocacy efforts,” says Jack Thomson, the organization’s current executive director. For the first fifteen years, PSABC was managed solely by volunteer effort, though professional staff have been employed for the majority of the past twenty-five years. Funded solely by private donations and a membership program, this private nonprofit corporation’s mission reads: “Through preserving and promoting the unique historic resources of our region, we work to sustain the heritage and sense of place that is Asheville and Buncombe County.”

There are other local nonprofit partners with a stake in historic preservation, as well. These include groups working to provide affordable housing, such as Mountain Housing Opportunities and Habitat for Humanity, or others that use historic buildings to do their work, such as the Salvation Army, which occupies a historic building in the downtown National Register historic district. Both the HRC and PSABC can serve as sources of technical advice for these organizations.

The Asheville Design Center is an example of an advocacy organization focused on community planning whose work with communities and neighborhoods in Asheville and Buncombe County also can affect historic preservation.

The spectrum of nonprofit partners also includes those addressing history, notably the Western North Carolina Historical Association (WNCHA). It operates the Smith-McDowell House as an interpretive site (owned by A-B Tech), offers public education on history and historic resources, and supports historical research. Other organizations that own historic sites and operate museums that offer history-related programs are described in Chapter 8.

In addition, as discussed in Chapter 8, there are many stakeholders in tourism, including the nonprofit Chamber of Commerce’s Convention and Visitor Bureau (carrying out work in collaboration with the Buncombe County Tourism Development Authority, a governmental body), the Asheville Area Arts Council,
and private businesses such tour companies and the Biltmore Company. Their collaboration on presenting Asheville’s stories and historic qualities is critical.

**NC State Historic Preservation Office**

In North Carolina, organized governmental interest in historic preservation began in 1903 with the founding of the North Carolina Historical Commission, the third oldest state public history program in the United States.

Today, the lead agency at the state level is the North Carolina State Historic Preservation Office. The State Historic Preservation Office assists private citizens, private institutions, local governments, and agencies of state and federal government in the identification, evaluation, protection, and enhancement of properties significant in North Carolina history and archaeology. The agency carries out state and federal preservation programs and is a section within the Office of Archives and History, North Carolina Department of Cultural Resources. Each state’s work is funded in part by its share of the federal Historic Preservation Fund, which comes from revenue generated by offshore oil and natural gas leases.

The chief services of the State Historic Preservation Office are the statewide survey of historic buildings, districts and landscapes; nominations of eligible properties to the National Register of Historic Places; environmental review of state and federal actions affecting historic properties; technical rehabilitation and restoration assistance to owners of historic properties; administration of state and federal historic tax credit programs; grant assistance for historic preservation projects; and assistance to local preservation commissions and administration of the Certified Local Government program.

At present, two representatives of the State Historic Preservation Office are stationed in Asheville at the North Carolina Department of Cultural Resources’ Western Office, providing preservation services in the twenty-five Western North Carolina counties. A Preservation Specialist administers the National Register program, maintains historic architectural survey files for the western counties, and provides training and advice for historic preservation commissions. A Restoration Specialist provides technical assistance for building rehabilitation and restoration, and administers historic preservation tax credit programs.

All State Historic Preservation Offices are required by the NPS under the National Historic Preservation Act of 1966 to develop a comprehensive plan for protecting and using historic and cultural resources within their state. North Carolina’s state plan, per NPS requirement, is updated approximately every five to ten years.

North Carolina’s 2022 Preservation Plan offers broad preservation goals and policy for anyone involved in preservation. Audiences for the plan include professionals in the state preservation office, planners in local governments, professionals in the not-for-profit sector, or citizens interested in protecting their community’s historic buildings. Pertinent points:

- **Mission Statement:** The mission of the North Carolina State Historic Preservation Office is to help the state’s citizens, private organizations, and public agencies identify, protect, and enhance North Carolina’s historic resources and communities through a coordinated program of incentives and technical assistance for today and future generations.

- **Vision Statement:** “That North Carolina’s citizens, with their diversity of backgrounds, roles, and aspirations, work together to support the identification, protection, and enhancement of the State’s historic resources, which provide deep roots to support future development, help us better understand ourselves and others, and offer a sustainable tool to ensure stewardship of our State’s history, economic growth, and a better future.”

STATE GOALS AND OBJECTIVES: Following are categories for goals developed under the plan: outreach/communication; partnerships; identification/designation; education/technical services; and advocacy.

HISTORIC RESOURCES IN ASHEVILLE AND BUNCOMBE COUNTY

Historic Resource Surveys

Decisions about what to protect, and how, through historic preservation must first be based on a sound assessment of historic resources through historic resource surveys, which record basic information about older properties and assess their condition.

Best practices concerning surveys involve (1) identifying high-priority areas and conducting state-of-the-art surveys routinely, (2) maintaining updated information on existing entries, and (3) making sure that the information from the surveys is widely available and easily accessible, preferably tied into local permitting for early, easy identification. For both urban and rural landscapes, cultural landscape studies should be used to identify important landscape characteristics and qualities that can be missed in studies of individual buildings. These studies are also often a good means of setting priorities for more-intensive individual building surveys.

Asheville and Buncombe County have benefited from a number of surveys over the decades since such surveys became routine, generally beginning in the 1970s and always in partnership with the State Historic Preservation Office, which has overseen the projects and provided matching grants for most of them (see sidebar beginning on page 13; for more details, see Appendix A).

In addition, in 2007, the HRC undertook a major survey update with the assistance of Acme Preservation Services. This most recent survey included an assessment of buildings previously surveyed and also included secondary structures, many of which were overlooked previously. More than 4,000 previously recorded resources were studied, “representing the cumulative recording of properties over the past forty years,” and a searchable, state-of-the-art database was compiled. The survey resulted in a total of 4,079 records, expanding from the 1,760 records provided by the NC Division of Cultural Resources from its years of files. “Searching the database reveals that 239 previously recorded resources have since been
demolished. The percentage of demolished properties is far less than has been seen in other recent county survey updates in North Carolina. Forty-two properties were categorized as substantially deteriorated and more than 1,000 were considered to be substantially altered. The number of properties categorized as rehabilitated was 629 and more than 2,450 properties were classified as unchanged [although this may be high due to uncertainty of preceding photographic records].” The data from this survey will be incorporated into the city’s standard geographic information systems (GIS) database, which will make it searchable for developers and property owners seeking information about their historic properties.

In 2012, Acme Preservation Services continued its work, adding “400 new properties to the comprehensive inventory of historic architectural resources within the city limits of Asheville. The newly surveyed resources in Phase II have not been previously recorded in State Historic Preservation Office survey site files and typically date from before 1960.” Following the completion of the 2007 survey update (called Phase I) APS had recommended approximately 800 resources to be included in the 2012 survey; available funding limited this survey to roughly half of the sites recommended for top-priority review, using the following criteria:

1. Properties and/or neighborhoods with intensive HRC activity or public interest (i.e., Biltmore Village and Montford/Montford Hills).
2. Directly threatened properties and/or neighborhoods.
3. Principal development corridors (e.g. Merrimon Avenue, Brevard Road, etc.).
4. Other corridors that may not qualify as potential historic districts and are not likely to be surveyed collectively.
5. Potential National Register-eligible properties and/or districts.

In a publication with much broader geographical reach, but which draws on survey work cited above when it comes to Buncombe County and Asheville, in 1999, Catherine W. Bishir, Michael T. Southern, and Jennifer F. Martin authored A Guide to the Historic Architecture of Western North Carolina. As with Cabins & Castles this highly respected handbook has done much to educate the public about the qualities of the region’s historic resources.

Federal Heritage Documentation Programs

The kinds of surveys described in the preceding section are the backbone of historic preservation. The information they provide can be used for more-intensive documentation and for formal recognition, which in turn can provide the basis for special protection and, sometimes, funding.
The highest standard for heritage documentation exists among the NPS’s four programs: “HABS (Historic American Buildings Survey), the federal government’s oldest preservation program, and companion programs HAER (Historic American Engineering Record), HALS (Historic American Landscapes Survey), and CRGIS (Cultural Resources Geographic Information Systems). Documentation produced through the programs constitutes the nation’s largest archive of historic architectural, engineering, and landscape documentation.”

Best practices include insuring that a community’s most unique structures, districts, and landscapes are studied and recorded with state-of-the-art methods, with the information made accessible to scholars (and the general public through educational programs). HABS/HAER/HALS/CRGIS allow the widest accessibility. The NPS has published standards and guidelines on its Heritage Documentation website.

There are eighteen HABS surveys on record for Buncombe County, including the following in Asheville: 16 Biltmore Avenue (Robert D. Bunn Building), 18 Biltmore Avenue (Gibbs Building), 78 Biltmore Street (Henrietta House), 12-16 Eagle Street, and 18 Eagle Street (Hutchinson Building). Resources outside Asheville are seven inns in Pisgah National Forest, Sherrill’s Inn in Fairview, the Swannanoa Tunnel (US 70, Ridgecrest), the NC Route 2408 bridge spanning Bull Creek, and two studies of the Blue Ridge Parkway, including Linn Cove Viaduct.

National Historic Landmarks Program

Buncombe County has two National Historic Landmarks (NHLs). Recognition of NHLs was established in 1935 for nationally significant historic places. They are designated by the Secretary of the Interior and possess exceptional value or quality in illustrating or interpreting the heritage of the United States. Approximately 2,500 historic resources bear this national distinction, only 28 of them in North Carolina. The Biltmore Estate was first recognized in 1963 (and has since updated its documentation, in April of 2005); and the Thomas Wolfe House was recognized in 1971. Although the benefits are chiefly related to the recognition, the NPS can provide technical advice and theoretically small amounts of grant funding to assist in maintaining the integrity of NHL properties. The NPS has no control over privately owned NHLs but can withdraw NHL designation if an owner fails to maintain the recognized resource’s integrity.

Best practices include routine reporting by the NPS on NHLs’ conditions through periodic status updates provided by owners, and updating older documentation by owners. Recent documentation requirements set a high standard reflecting the level...
of recognition. Achieving NHL status for unrecognized buildings is best achieved through theme studies that help to set the context for recognition.

The federal Save America’s Treasures program was one of the largest and most successful grant programs for the protection of our nation’s endangered and irreplaceable cultural heritage. The funding was ended by Congress in 2010. In 2002, the Smith-McDowell House received a grant of $100,000 and the Grove Arcade restoration received a grant of $493,054 in 2005. Only buildings considered to rise to the level of NHL quality received such grants, so the fact of these SAT grants is a strong indication of their possible NHL recognition at some point in the future.

The St. Lawrence Basilica (listed in the National Register in 1978) is pursuing NHL status. Given its association with renowned specialty tile artist, builder, and architect Rafael Guastavino (recent subject of a National Building Museum retrospective) and architect Richard Sharp Smith plus its unusual oval dome and high integrity, achieving NHL status appears possible. NHL recognition could benefit the diocese as it seeks visitors and donations to maintain the property at the highest level.

The National Register of Historic Places

The National Register of Historic Places is a critical element of the National Historic Preservation Act of 1966. The act as a whole guides a robust national program to coordinate and support public and private efforts to identify, evaluate, and protect America’s historic and archeological resources. The National Register includes buildings, structures, objects, sites, and districts of local to national significance. It is the official list of historic places worthy of preservation, providing recognition to listed buildings and consideration in federal undertakings; it is maintained by the NPS.

Listing in the National Register does not affect decisions by private property owners. Those owning National Register-listed properties who wish to obtain federal tax credits for rehabilitation (described in Chapter 4), however, must follow the Secretary of the Interior’s Standards for Rehabilitation (Appendix B) and undergo a process of review in collaboration with the North Carolina State Historic Preservation Office.

The National Register program is connected to the NPS’s Travel Itinerary program described in Chapter 8, and also to the NPS’s Teaching with Historic Places program, which uses National Register-listed properties “to enliven history, social studies, geography, civics, and other subjects” using “a variety of products and activities that help teachers bring historic places into the classroom.”

**Best practices** for the National Register are for agencies and organizations to maintain an advisory capacity for private owners wishing to list their properties for the recognition and/or to take advantage of tax credits. Resources listed in the National Register are automatically identified for Section 106 review (described in the next section). From a public policy point of view, the reason to pursue National Register listings is to encourage use of tax credits for rehabilitation. Recognition is not strictly necessary to achieve the protection meant for registered properties; resources not listed are still considered in the Section 106 process if identified in a timely fashion and determined eligible by the State Historic Preservation Office. Listing of districts in the National Register, where feasible, allows property owners to avoid the added work and expense of individual nominations.

Asheville has a considerable presence in the National Register. North Carolina’s State Historic Preservation Office provides computerized access to National Register listings in all of Buncombe County, plus other categories of properties
(surveyed but not listed, eligible for study, or determined eligible). As of August 2014, there are 113 separate National Register listings (including boundary amendments to historic districts), plus five listed as “gone.” Further analysis reveals that there are fifty-nine sites or districts in Asheville and another twenty-six outside Asheville in Buncombe County and other municipalities. See Appendix C.

For specific information on the Downtown Asheville National Register district (technically a multiple resource area), see the sidebar on page 48.

**LOCAL HISTORIC DISTRICTS**

Given the large number of already-surveyed historic resources (and historic districts listed in the National Register as one consequence of these surveys), it is somewhat surprising that Asheville does not have more locally protected historic districts. As mentioned in the description of the HRC above, there are four such districts, Albemarle Park, Biltmore Village, Montford, and St. Dunstan’s. St. Dunstan’s is not also listed in the National Register – and that neighborhood’s motivation suggests why local district designation may be useful to neighborhoods. Local districting provides an added level of review to proposals for demolition, additions, and new construction, and St. Dunstan’s, a small neighborhood, decided the added protection was worth the added regulation.

**Best practices** with existing historic districts have been achieved by the HRC in its procedures and design guidelines, as described previously. For Asheville’s large number of potential historic districts, public education and outreach about the value of their resources and the local process of project review may lead some additional neighborhoods to consider the possibility. Chapter 5 addresses this potential in the context of neighborhood planning. It is not necessary, however, to undergo such comprehensive neighborhood planning. Local leaders can begin discussions with

The Biltmore Estate was named a National Historic Landmark in 1963, at about the time that it first turned a profit as a heritage attraction. Today, it is a model for visitor satisfaction, for-profit management, and stewardship that includes responsibility for a landscape designed by Frederick Law Olmsted, Sr. (Photo courtesy Heritage Strategies, LLC)

their neighbors at any time; both the HRC and PSABC can provide helpful information to support their discussions.

SECTION 106 AND NORTH CAROLINA ENVIRONMENTAL REVIEW

Section 106 of the National Historic Preservation Act of 1966 requires federal agencies to take into account the effects of their undertakings on historic properties, and afford the Advisory Council on Historic Preservation a reasonable opportunity to comment. The Advisory Council on Historic Preservation (ACHP) is an independent federal agency “that promotes the preservation, enhancement, and productive use of our nation’s historic resources, and advises the President and Congress on national historic preservation policy.” The historic preservation review process mandated by Section 106 is outlined in regulations issued by ACHP.

“Undertakings” can include federal grants or permits in addition to federal direct actions, and affected historic resources can include not only those actually listed in the National Register, but those which might be eligible. The process of review in North Carolina typically involves the State Historic Preservation Office as well as the public. According to the Advisory Council, “consultation usually results in a Memorandum of Agreement (MOA), which outlines agreed-upon measures that the agency will take to avoid, minimize, or mitigate the adverse effects. In some cases, the consulting parties may agree that no such measures are possible, but that the adverse effects must be accepted in the public interest.”

In addition to the federal Section 106 process, North Carolina has a “somewhat parallel” process (NC 2022 Preservation Plan, p. 31) for reviewing the impact on historic resources by any project that “is carried out with public [state] funds and/or uses state land, and requires a state approval or action in order to be implemented, and has the potential for an environmental impact.” NC General Statute 121-12(a) requires that “a state agency with direct or indirect authority to fund, permit, license, or approve an undertaking that may affect a property listed in the National Register of Historic Places must offer the North Carolina Historical Commission the opportunity to review and comment upon the undertaking.”

The Advisory Council and the North Carolina State Historic Preservation Office have long track records of successful implementation of Section 106 and state statutes. Recent Section 106 reviews in Asheville have resulted in mitigation funding and studies that have advanced historic preservation even though some
historic resources were adversely affected. Specifically, Pack Square demolition and reconstruction, which affected archeological resources and involved a federal grant, resulted in funding for a partial update of Asheville’s historic resources survey, and rehabilitation of buildings in the Eagle Market district led to financial support for this master plan.

Best practices concerning Section 106 and state review involves bringing historic preservation specialists at the local and state levels into projects involving federal and state agencies or their funding as early as possible, to identify historic properties and assess probable effects. The HRC and State Historic Preservation Office are best positioned to help gain early and swift determinations about significance, impacts, avoidance, and mitigation, which generally eases the process and reduces costs for all involved. Their early involvement, for example, can help to determine the best way, perhaps through project siting and design, to avoid or minimize harmful impacts or costly mitigation. The earlier historic preservation is considered in a project, the more likely that avoidance can be used as part of the means of reducing project impacts. Best practices also allow for creative mitigation that advances historic preservation in other arenas when review does not lead to preservation.

ISSUES, OPPORTUNITIES, AND RECOMMENDATIONS
The HRC has compiled an excellent track record in gathering and maintaining high-quality information about Asheville’s resources and developing citizen-supported design guidelines for the four locally designated historic districts. It is in the process of reformatting architectural guidelines for ease of use and developing companion guidelines for Albemarle Park’s historic landscape, which is integral to the district’s significance. It routinely undertakes public outreach during Preservation Month each year (May) and has re-published a major, popular survey, Cabins & Castles.

This historic preservation plan has been undertaken at the HRC’s behest, at a point when it appears that much of what the HRC can readily achieve, given existing resources, staffing, and public support, has been accomplished.

What more should the HRC do? Following are key issues and recommended strategies.

Preservation Surveys and Historic Districts
The HRC has done a fine job tending to the never-ending need for surveys and nominations, given limited funding and a large quantity of historic properties to account for. The number continues to grow, given that a healthy quantity of 1950s and 1960s “mid-century modern” structures are now old enough for surveying. Older surveys would benefit from updating and use of newer survey technologies.

Context studies of particularly interesting topics for the region would prepare the ground for surveys, by enabling surveyors to understand the significance of individual buildings within larger themes. Possible themes include agriculture, forestry, the arts, sanitariums, city-building, landscape architecture, the American Indian landscape, and early European settlement.

Strategies
2.1 Continue to invest in historic resource surveys and National Register nominations for historic districts.

2.2 Complete the effort to tie the State Historic Preservation Office’s “HPOWeb” database into city and county databases and maintain updates.

History Lost
Since North Carolina’s survey program began in the 1970s in Asheville and Buncombe County, the following losses of historic structures have occurred—by voluntary demolition, natural loss (e.g., fire), and demolition required by the municipality when a building was severely neglected. (In the North Carolina survey database, surveyors often simply noted the properties as “gone,” but if it was known why or when the loss occurred, the narrative portion of the database may so state, which provides the following data.)

Losses among National Register Listings
- Loss of 102 contributing primary resources in National Register-listed historic districts (“NHRDs”; this does not include districts listed for study or determined eligible for the National Register).
- Loss of 67 contributing primary resources in the Montford NHRD (of 657 total contributing/non-)

(Continued on page 22)
Loss of 24 contributing primary resources in the Chestnut Hill NRHD (of 268 total contributing/non-contributing resources). Two of these were demolitions in the 1990s of houses that had been rehabbed in the 1980s with use of the tax credits. Losses among All Previously Recorded Resources (regardless of designation)

- More than 250 losses of previously recorded historic resources in the city are documented in North Carolina’s database since the survey program began, 124 of which were houses. Annie Laurie McDonald, HPO Preservation Specialist who compiled this data, remarked, “I think this is interesting, since affordable housing is often accomplished through the rehabilitation of older or historic building stock.”

- Data on losses by date/decade does not exist for all records, but the database shows that at least 47 of these losses were demolitions in the 1980s. At least 52 occurred in the 1990s. At least 60 occurred in the 2000s. That accounts for more than half of the total losses. McDonald commented, “While this is not definitive, it appears as though the losses are

2.3 Undertake a reconnaissance survey of Asheville neighborhoods to set priorities for formal historic resource surveys.

2.4 Undertake historical context studies to support surveys and interpretation. (Repeated in Chapter 8)

Loss of Listed and Contributing Historic Buildings

Under current state law, the threat of demolition of historic structures, both within and outside locally designated historic districts, especially in the downtown National Register historic district, is a long-standing concern, especially for surface parking and anticipatory demolition (demolition that takes place without plans in place to replace the structure). Gaps created by such demolition in historic districts can affect the viability of surrounding businesses and therefore their historic buildings.

Currently the HRC reviews only development decisions within locally designated historic districts, and can delay demolition for up to a year unless the owner presents economic considerations for the HRC to take into account in reviewing hardship. There is no process for the HRC to provide comments to other project or design review bodies (Downtown Commission, River Arts District Commission), the city’s Technical Review Committee, or other city development-review staff concerning the issuance of building or demolition permits in National Register historic districts.

While a concern about demolition may be ever-present, following the best practice of keeping owners and their advisors informed about their properties’ stewardship needs and opportunities can help to head off owners’ decisions to demolish made without awareness of all possible options.

In addition, PSABC operates its Historic Property Easement Program, which is designed to present substantial protection to historically significant houses and buildings. This program offers property owners the opportunity to work voluntarily with PSABC in the creation of customized deed restrictions ensuring the future of these significant properties. Described further in the sidebar found on page 36, this is arguably the most powerful tool to protect these resources in North Carolina, because as described here local governments are limited in their ability to fully prevent demolition. A preservation easement gives PSABC the ability to prevent demolition and architectural oversight of proposed alterations and additions. The donation of a preservation easement often provides the property owner with a significant tax deduction and is an additional way that developers can enhance their bottom line returns on their investments. To date, this program has worked to protect numerous properties across Asheville and Buncombe County.

This program should be viewed as a powerful alternative to local designation of landmarks and local districts. Additionally, preservation easements are a good tool to address the protection of properties in the broader, county-wide geography and often can complement the county’s agricultural conservation easement program (see Chapter 7).

Strategies

2.5 Increase outreach efforts to encourage individual landmark designation. Create educational materials and conduct workshops; visit individual property owners. Investigate the possibility of establishing a volunteer effort to assist property owners on the research and preparation of landmark reports. Include better information on procedures on the HRC website. (Also addressed in Chapters 4 and 6.)

2.6 Adopt a Notable Properties program to encourage stewardship of historic properties. (Repeated in Chapter 3)
2.7 Enhance web pages and update brochures to explain district designation and landmark procedures to encourage establishment of districts and landmarks. Include information on neighborhood surveys completed, and planned.

2.8 Concerning demolition permitting:

2.8A Require a recommendation from the HRC to the Downtown Commission prior to issuance of a demolition permit for contributing buildings in the downtown Asheville National Register district. (Amend HRC bylaws to reflect a 60-90 day decision deadline.) (Repeated in Chapter 6)

2.8B Require a recommendation from the HRC to the Asheville Planning and Zoning Commission and the Buncombe County Planning Board prior to issuance of a demolition permit for other buildings listed on the National Register of Historic Places.

2.9 Continue to work with PSABC to promote the Historic Property Easement Program, and include information on the website.

2.10 Develop a plan for the adaptive reuse of the Thomas Wolfe Cabin and rehabilitate the cabin to accommodate the new use. Explore funding opportunities.

Conflicting Uses on Historic District Edges

The edges of some existing local and National Register districts have experienced some adverse effects from adjacent development. This is an example where other city action, outside the responsibility of the HRC, is needed to address the conflicts between historic preservation and development decisions outside historic areas. Planning for the implementation of this strategy could especially be incorporated into the neighborhood planning discussed in Chapter 5 but it may also pertain to commercial districts as discussed in Chapter 6.

Strategy

2.11 Consider special overlay district zoning for “gateways” to selected districts affecting historic neighborhoods. (Repeated in Chapter 5)

Conflicting Public Policies and Practices in Asheville

In Asheville, historic brick sidewalks, granite curbs, and other unique or character-defining elements of the public realm are not protected outside historic districts. Once gone, they are virtually impossible to replace. This is just one example of the need to inculcate preservation as a value and a tool in all public initiatives.

More generally, as a part of local government, the HRC is one of the city’s various bodies expected to participate in and be consulted during governmental planning and decision-making. For example, the HRC has been a part of the comprehensive planning and neighborhood planning discussed in Chapter 5. Strategies here suggest a number of simple city statements or policies to help to reinforce the desirability of involving the HRC and considering historic preservation in city projects and programs. For example, the recent major maintenance projects for both City Hall and the County Courthouse used the highest possible standard for rehabilitation, the Secretary of the Interior’s Standards (see Appendix B).

Historic preservation can support affordable housing – and vice versa. A city policy affirming this link and the desirability of maximizing both interests is one way of providing a sustained market for historic preservation. Dollar for dollar, historic preservation creates more jobs (and more skilled jobs) than new construction. Local government’s stated interest in historic preservation linked to affordable housing development thus addresses jobs as well as housing. The environmental and design

(Continued from page 22) spread fairly evenly across the nearly forty years since the architectural survey program began.”

- The database indicates that at least 19 recorded resources have been replaced by surface parking, 8 of which were in National Register-listed historic districts.
- The database also indicates that road projects resulted in demolition of at least 17 previously recorded resources in Asheville, beyond the demolitions that took place for the Beaucatcher Cut and I-240.
benefits of the re-use of older buildings, as described elsewhere, should also be factors in choosing affordable housing projects that incorporate historic preservation and meet the highest possible standards, carefully considering tradeoffs of cost and design quality.

**Strategies**

2.12 Establish a city policy to preserve historic, character-defining elements of the public realm city-wide, including all City owned real property. Incorporate this policy into Public Works Strategy 1 found in Asheville 2025 (p. 159; or its replacement in the next comprehensive plan).

2.13 Enlist the HRC and staff in city sustainability initiatives and guidelines, to articulate and quantify the importance of energy savings through rehabilitation of existing buildings, include information on the city’s website.

2.14 Establish city policy to support re-use of historic buildings for affordable housing using the Secretary of the Interior’s Standards for Rehabilitation wherever feasible.

2.15 For the Planning & Zoning Commission, Downtown Commission, River ArtsCommission, and the Housing Authority, establish city policy that staff reports will consider the impacts on National Register districts and properties of proposed action by these bodies.

2.16 Establish informal liaisons to other city and county bodies whose work affects historic preservation.

**Section 106 and NC Environmental Reviews**

By law, where there is state or federal involvement in a given local government program (funds, permits, lands, etc.), local use of funds for housing, neighborhood conservation, transportation, and other programs go through the Section 106/ environmental oversight process described above. The process is easiest when agencies seek early involvement of the HRC and the state oversight agency, the State Historic Preservation Office.

City and county policies and permitting processes should encourage agencies and project leaders to engage Section 106 early, prior to other development review requirements. Boards and commissions involved in reviewing city and county projects should require planning staff comments specifically addressing Section 106 in staff reports. It is simplest to establish a broad policy that (1) the HRC is to be invited into discussion of local government and local government-funded capital projects and earth-moving projects at the earliest possible opportunity whenever suspected historic or archeological resources might be involved, (2) whether or not state or federal funding might be involved, and (3) whether or not the resources have been determined to be significant. Discussion of the details of such a policy could take place as the city renews the HRC’s programmatic agreement with the State Historic Preservation Office under its Certified Local Government status.

Routine public education that ordinary project development considerations should include historic preservation would help to develop a public culture ensuring that
Historic preservation is a value to be engaged early and effectively in project reviews. This includes careful explanation of existing procedures for city reviews in the various historic districts and commercial areas, for applicants for development projects. “Wayfinding” signs or perhaps simple street sign addendums (called “toppers”) in Asheville that signal the existence of National Register Historic Districts would also be helpful in alerting property owners, developers, investors, foundations, visitors, and residents that certain properties deserve special consideration as the city continues to grow and develop. Montford, which is also a local historic district, already has several such signs erected with the support of the HRC.

**Strategies**

2.17 **Establish a city policy to invite HRC staff into discussions of city, state or federally funded projects** at the earliest possible opportunity whenever suspected historic or archeological resources might be involved.

2.18 **Implement the Asheville wayfinding system’s markers for recognized Asheville historic districts or other markers as appropriate**, especially in the downtown Asheville National Register historic district. (Repeated in Chapters 3, 6, and 8)

**Operation of the Historic Resources Commission**

The HRC has a duty to tend to the needs of historic resources throughout Asheville and Buncombe County. Its powers as a quasi-judicial body enabled under state law include administering project review in four local historic districts. With an average of 175 CA applications per year, this review consumes a great deal of commissioners’ and staff time, and it is often the principal lens through which the public (and public officials) now view the HRC.

But the HRC must avoid being boxed in by this demanding role. It must also maintain ongoing knowledge of all historic resources across the region and build ongoing public awareness of and support for the investment in and protection of those resources. Chapter 3 emphasizes the importance of public outreach – of conveying clear, consistent messages, repeatedly, about the value of preserving historic resources to Asheville and Buncombe County. This goes well beyond project review for local historic districts. Moreover, other chapters that follow also call for considerable effort. To accomplish it all, even in phases over the ten years of this plan, will require a heightened level of effort on the part of the HRC and staff, plus partners and volunteers. Every activity undertaken by the HRC in the thirty-five years since it was established has met the highest standards. But it must do more, across more of the city and county – and it will need more resources and more organizational strategies to do so.

Strategies here are basic operational ones, to support the HRC’s internal planning and development of adequate staffing and budgetary resources for its work.
Strategies for Operation of the Historic Resources Commission

2.19 Enhance staffing and budgetary resources available to the HRC.

2.20 Work with the County to establish a dedicated funding program.

2.21 Work with the Albemarle Park community to garner support for adoption of the revised architectural guidelines and new landscape guidelines for Albemarle Park by the HRC.

Preservation in the public realm involves close attention to original plantings of street trees, which vary street by street by design in Asheville. A reconnaissance survey can help to identify important landscaping patterns and other assets of the public domain that individual building surveys may not detect. (Photos courtesy Heritage Strategies, LLC)
CHAPTER 3

PUBLIC OUTREACH AND ADVOCACY

INTRODUCTION
Later chapters in this plan address ways to build public appreciation for historic resources specific to the topics of neighborhoods, commercial districts, interpretation, and heritage tourism. This chapter covers the role of the Historic Resources Commission and others overall in building public support for the historic preservation process.

WHY REACH OUT?
While there are many residents who have clearly valued Asheville’s historic resources for many years, ensuring that most residents know and understand the city’s historic character is an ongoing task for the HRC and other preservation advocates. As generations change, residents come and go, and officials retire, shared community memory about the tasks and values of historic preservation is easily lost.

Demands from both population growth and tourism will intensify pressures for change across all areas of the city and county. It will be valuable in this climate to gain public understanding of the value of historic resources in Asheville and how historic preservation processes and investment play out in the tradeoffs inherent in development and change. Decisions about whether, and how, to change historic business and residential environments need a stronger base of understanding.

There are multiple issues that need a careful, far-sighted strategy of public outreach and advocacy to be followed by the HRC in concert with supporting agencies and organizations.

Smith-McDowell House, headquarters of the Western North Carolina Historical Association, one of Asheville’s many nonprofit preservation partners. (Photo courtesy Heritage Strategies, LLC)
First, in recent years, it appears that historic preservation in Asheville has tended to be regarded by the general public as the focus of a few dedicated individuals rather than a topic of broader interest. Historic preservation is a critical component of community character and a contributor to the environment supporting heritage tourism. This is a message that must be crafted carefully and delivered consistently to a broad audience.

Second, there is a perception that much historic fabric is protected. There are, however, just three historic residential neighborhoods and one commercial district with oversight by the Historic Resources Commission. Although a substantial portion of the downtown is listed in the National Register, without local designation, there is no mandatory compliance with public design review recommendations and demolition is allowed by right.

Finally, beyond any general public lack of understanding of process and level of protection, there may be a lack of public understanding of the value of the historic resources themselves. It is critical that the community as a whole see the value of historic resources – why would anyone care about the process if they do not care about the things to be protected and enhanced?

Conditions are ripe for messages about the value of historic resources and the preservation process. Objectively, many visitors and residents do value the experience of historic Asheville. Tour companies have grown in recent years in response to visitor demand. Both Biltmore (a National Historic Landmark, the nation’s highest honor) and Biltmore Village (a local and a National Register historic district) are widely appreciated. The caretakers of the Basilica of St. Lawrence are now considering seeking National Historic Landmark recognition, as well. Nearly a thousand new hotel rooms are being built in the region in the next two years – strong indication of public interest in Asheville.

Downtown Asheville’s unique historical qualities, however, are less well recognized. As the CVB likes to point out, the downtown is “home to the Southeast's largest collection of Art Deco architecture outside of Miami” – but the National Register nomination update fell back on the default “locally significant” determination and does not substantiate such a claim. The River Arts and West Asheville areas are only just beginning to assess their historic qualities as they consider how to accommodate more development.

Of equal importance in constructing messages for residents and leaders is the value of historic structures in fostering Asheville’s unique business environments. Each of the four large, well-recognized, thriving historic commercial areas – the river-area industrial district now known as the River Arts district, West Asheville, Biltmore Village, and the downtown – offers a different experience for both residents and visitors. Historic structures are integral to that experience.
A uniquely long-range and important element of any approach to building public support for historic preservation is to enlist Asheville’s history and historic sites in addressing K-12 school curriculum requirements. Models across the nation exist to help design a multi-year curriculum using Asheville’s history and historic sites and support current curriculum requirements across the board (science, social studies, language arts, math, and more). Moreover, historic preservation, tourism, and city planning all have great potential to support multi-disciplinary learning, team learning, and learning about problem-solving methods. Including these topics in the curriculum would help to ensure that the next generation of community leaders and residents is knowledgeable about the city’s heritage, how to care for it, and how to keep it alive for generations to come.

**Strategies**

The orientation of the HRC to community service and its articulation of historic preservation values sets an important tone. It is critical to craft and promote messages to maintain community interest in preservation opportunities and engagement in the values embedded in the art of community-based historic preservation. Suggested messages appear in the sidebar at right.

HRC staff and commissioners are limited in the extent to which they can do even more than they are already achieving, however. Enlisting partners in public outreach and advocacy is critical. One step to bring these partners together would be to organize them as a round-table group that would meet regularly to network and undertake joint projects, such as the web portal first recommended by an implementation committee formed after the completion of the Downtown Master Plan (described in Chapter 6). The group could also support the collaboration needed to accomplish interpretation, education, and tourism initiatives described in Chapter 8.

Strategies outlined below will generally support more specific recommendations in Chapter 2 and Chapters 4 through 8 addressing the operations of the HRC, neighborhoods, commercial areas, Buncombe County, interpretation, and heritage tourism.

1. **Establish goals and objectives for standing committees on Education & Community Outreach and Landmarks & Research** at the HRC’s annual retreat.

2. **Institute a process at monthly HRC meetings for Education and Landmarks sub-Committee Chairs to report on progress towards meeting goals of this plan.**

3. **Establish a partnership that would meet periodically to promote networking of organizations whose work relates to history and preservation.** The partnership could coordinate funding opportunities, plan periodic events such as a history roundtable, or create a web portal for easy access to heritage organizations and projects in the region. (Repeated in Chapter 8)

4. **Undertake or support studies to elevate Asheville’s and the region’s architectural significance** and communicate results to the public:
   - **3.4A** Research the possibility of establishing downtown Asheville as a district of state or national significance vs. local only.
   - **3.4B** Support nomination of the St. Lawrence Basilica as a National Historic Landmark.
   - **3.4C** Explore potential for HABS summer projects to bring intern teams to the region.

**Key Messages**

Preserving Asheville’s and Buncombe County’s heritage requires a continuing, unified effort among concerned public officials, citizens, and organizations to create a strong voice that has a lasting influence on public perception. Key messages could include:

- “Historic resources have been and will always be vital to this region’s success.”
- “Tax credits for historic resources offer a major economic opportunity for this community to attract developers and investment.”
- “The greenest building is the one already built.”
- “Historic structures foster Asheville’s unique business environments and offer great investment opportunities.”
- “Historic preservation is part of the art of community-building and placemaking that makes Asheville unique.”
3.5 Develop brochures and web pages highlighting themes where the Asheville region shines – especially Art Deco architecture and landscapes related to health and wellness.

3.6 Implement the Asheville wayfinding system’s markers for recognized Asheville historic districts or other markers as appropriate, especially in the downtown Asheville National Register historic district. (Repeated in Chapters 2, 6, and 8)

3.7 Continue to support or encourage the writing of high-quality guidebooks such as the one recently published for Albemarle Park.

3.8 Increase funding available to the HRC to support public outreach, education, and research in the form of additional staff resources, funds for projects to heighten visibility of historic resources, and possibly small grants to partner agencies and organizations.

3.9 Develop a continuing education program for interested professional organizations such as real estate professionals and offer training concerning Asheville’s historic qualities and historic preservation procedures. (May be combined with training on historic tax credits, as discussed in Chapter 4.)

3.10 Adopt a Notable Properties program to encourage stewardship of historic properties. (Repeated in Chapter 2)

3.11 Institute an annual historic preservation roundtable gathering to promote the networking of organizations whose work relates to history and historic preservation.

3.12 Work with the Montford Community to develop a plan and signage for the City/HRC owned property in the district.

3.13 Establish a city policy to allow public access and programming for utilization of Deagan Chimes at City Hall.

3.14 Collaborate with area schools to develop a curriculum focusing on the importance of history and architecture in creating vibrant, sustainable places.
CHAPTER 4

HISTORIC TAX CREDITS

INTRODUCTION

Income tax incentives for the rehabilitation of historic structures listed in the National Register of Historic Places are critical tools for historic preservation and economic development, and have been so across the state for decades. Property owners in Asheville have made particularly effective use of the historic tax credit (HTC). Buncombe County is the second-highest user of the federal tax incentives for historic rehab in the State of North Carolina, which itself is the third-highest beneficiary of the federal program among all states.

From 1979 to 2014, more than 173 income-producing buildings and more than a hundred homes have been rehabilitated and qualified for historic tax credits in Buncombe County, representing more than $146 million invested in Buncombe County’s historic buildings.

A large proportion of Buncombe County’s tax credit activity has occurred in Downtown Asheville, and in the National Register Historic Districts of Montford.

By breathing life into vacant warehouses, factories, hotels and more, the federal historic tax credit brings new hope and stability to neighborhoods, setting the stage for additional investment.

— Stephanie K. Meeks, President, National Trust for Historic Preservation
Biltmore Village, and North Asheville. Revitalization of these neighborhoods may be directly attributed to the availability of HTCs as an investment incentive.

The local return on this investment is considerable. According to the National Trust, “$1 million invested in historic rehabilitation produces markedly better economic impact in terms of jobs, wages, and federal-state-and-local taxes than a similar investment in new construction, highways, manufacturing, agriculture, and telecommunication.”

**HOW THE HISTORIC TAX CREDIT WORKS**

Tax credit programs offer considerable incentives to taxpayers who undertake substantial rehabilitation of qualified historic, income-producing buildings and industrial sites that are listed in the National Register of Historic Places. Under federal law, historic commercial properties are eligible to receive a 20 percent return on qualified rehabilitation expenditures, in the form of combined federal and state income tax credits (20 percent federal, 20 percent state). The state “mill credit” was instituted for historic industrial buildings and complexes, and buildings associated with public utilities and agricultural production. In Asheville and Buncombe County, this enhanced state tax credit allows the developer of a large-scale rehabilitation to accrue a 30 percent state tax credit on top of the 20 federal tax credit – potentially reducing the taxpayer’s tax liability by as much as 50 percent of qualified project costs.

The state tax credit program, which took effect in 1998 but ended on December 31, 2014, offered 20 percent for ordinary commercial rehab, plus another 10 percent if
the rehab were for a “mill building.” It also offered 30 percent for the rehabilitation of non-income-producing historic properties, including private residences, so long as rehab expenses exceed $25,000 within a 24-month period and the building is listed in the National Register at the time of project certification. There is no equivalent federal credit for owner-occupied residential rehabilitations.

Applications for income-producing structures are subject to a joint review by the State Historic Preservation Office and the National Park Service (NPS), with final authority resting with the NPS. All rehabilitation work must meet the Secretary of the Interior’s Standards for Rehabilitation (Appendix B). Applications for non-income-producing historic structures were reviewed solely by the State Historic Preservation Office, subject to oversight by the North Carolina Historical Commission.

The federal government also offers a 10 percent tax credit for the rehabilitation of non-historic, non-residential buildings built before 1936 so long as certain percentages of walls and internal structural framework are retained. There is no formal review process for rehabilitations of non-historic buildings.

A tax credit essentially allows the property owner or developer to recoup a portion of project costs. The tax credits may offset the property owner’s income tax liability, or may be transferred to a corporate investor through a process called syndication. The returns to the federal, state, and local governments for this “discount” is made up in higher property values (and thus greater tax revenues from that source), more jobs (and income tax revenues from that source), and more income in the pockets of the project-generating taxpayers who are likely to recycle their extra funds into other valuable local projects.

“From its implementation in 1998, North Carolina’s Historic Preservation Tax Credit program has done far more than preserve valuable historic structures. While retaining irreplaceable assets, bringing new life to downtowns and inspiring sustainable development patterns, it has also had a tremendous impact on the state’s economy,” says Becky Holton, author of a 2008 report for the University of North Carolina at Chapel Hill, A Profitable Past, A Priceless Future: The Economic Impact of North Carolina’s Historic Tax Credit. The report documents the “catalytic effect of historic rehabilitation in the state and the multiplied returns to the North Carolina economy” – more than $1.4 billion in revenues, 14,100 jobs and $438 million in additional employee compensation. The report estimated that the “cost to the state of roughly $3.6 million per year in foregone revenues has stimulated approximately $160 million in new economic activity annually.”

“Historic preservation is smart growth, and smart investment,” notes Preservation North Carolina, a statewide advocate for the North Carolina credit. “Since 1976, over 2,000 completed ‘certified rehabilitation’ projects have been reviewed by the N.C. State Historic Preservation Office, representing over one billion dollars of investment in historic properties. The spinoff from all this activity includes job creation, downtown and neighborhood revitalization, improved community appearance, and greater community pride.”

**WHY THE HTC IS IMPORTANT**

With the expiration of state tax credits – both for owner-occupied residential projects and large scale industrial projects – at the close of 2014, the existing incentive for historic rehab of commercial buildings is now halved. Working to obtain a 20 percent federal tax credit, however, is still a worthy investment in an environment where many other investments yield single-digit returns and ordinary savings accounts are at zero. The state’s tax credit sunset also removed preservation incentive for rehabilitation of owner-occupied residences, including upper floor condo units so prized in downtown revitalization. Credit for the development of

**Historic Tax Credits in Asheville**

Rehabilitation of North Carolina’s historic buildings increased dramatically following the expansion of the state tax credit for historic buildings and residences in 1998. Since that time, with the state tax credits enhancing the existing federal credit, 2,154 building rehabilitation projects were completed in North Carolina, representing private investment in historic buildings exceeding $1.56 billion.

Until recently, when Durham took the lead, Asheville and Buncombe County ranked first in the North Carolina for completed tax credit rehabilitations, with 173 complete commercial and rental residential projects. Many of the rehabilitation projects benefiting from state and federal tax credits are located in Asheville’s downtown core, and a significant concentration is in Biltmore Village. These building projects represent an estimated total estimated rehabilitation expenditure of $1.46 million. Buncombe ranks fifth in the state (behind more populous urban areas such as Charlotte, Durham, and Greensboro) for completed residential rehabilitations, with total estimated rehabilitation expenditures of $18 million. Many of these residential rehabilitations have occurred in the downtown as upper floor condo units, and also as single family homes.
these condos by commercial developers, which would then sell them to owner-occupants, would still be available.

The loss of the state tax credit poses a threat to continued private investment in Asheville’s historic buildings. Other historic preservation programs described in this plan are important, with regulatory and educational elements comprising two legs of a well-balanced system. The economic incentive for historic preservation provided by the HTC, however, is a critical third leg that provides essential stability and encouragement. It is a proven way to continue to achieve major historic preservation while encouraging compatible economic growth.

HTC-supported rehabilitation has been a major form of private investment in Asheville. From 1979 to 2014, 173 income-producing buildings and more than a hundred homes have been rehabilitated and qualified for HTCs across Buncombe County, including the majority of the commercial rehabilitations in the Downtown Asheville National Register Historic District. These rehabilitation projects represent more than $146 million invested in Buncombe County’s historic buildings.

There are many more opportunities for Asheville to benefit from tax credit stimulus for downtown investment. The downtown district alone includes 257 historic structures, and many apparent rehabs among the 68 completed there have addressed only the needs of the ground floor retail space.

While the city and county offer a lasting property tax reduction of 50 percent for designated local landmarks (if the owner applies each year to the tax office), this is a modest incentive compared to the HTC, particularly if the state credit can be restored. The city and county, led by the Historic Resources Commission, should study what independent steps they might take at the local level to improve conditions for investment in historic buildings, focusing on commercial properties. Both Baltimore and Los Angeles, in partnership with the National Trust for Historic Preservation, have recently led major studies of how to reduce barriers to investment in historic commercial structures.

The lack of visibility in recent years of historic preservation’s large and immediate impact on private investment in the revitalization and growth of the city of Asheville is a concern. Only with such recognition – a need addressed in the preceding chapter – will it be possible to build support for additional local programs.

**Strategies**

4.1 Work to reinstitute state Historic Tax Credits through advocacy to North Carolina legislators, including supporting local and statewide advocacy organizations such as PSABC and PNC that provide leadership in advocacy efforts.
4.2 Provide information to support such advocacy by refining an Asheville-specific and Buncombe County-specific database of properties that have used the HTC and by working with the Chamber of Commerce and city permitting agencies to develop data concerning the actual level of stimulus achieved. Combine this information with cogent messages about the remaining opportunities for investment in Asheville (see next strategy).

4.3 In downtown Asheville, using a map of buildings that have used the tax credit, perform a windshield-level survey of these buildings to investigate how many might qualify for additional HTC support for rehab (on, say, upper floors), and determine the number and characteristics of other buildings in the district that have not made use of the HTC and which may be eligible.

4.4 Encourage individual landmark designation where appropriate, in order to provide property tax reduction as an incentive for completion of high-quality rehab and/or simple maintenance (partial repeat from Chapter 2).

4.5 Continue to provide technical assistance to property owners and investors unfamiliar with the use of the HTC. Identify private sector consultants capable of advising investors and assisting with the HTC process.

4.6 Offer training to real estate professionals and others advising property owners concerning opportunities for the historic tax credit in Asheville. (May be combined with training on Asheville’s historic qualities and historic preservation procedures, as discussed in Chapter 3.)

4.6 Explore other options for added incentives and for reducing barriers to rehabilitation: consult with local banks about designing special terms for loan packages; explore the possibility of using state and federal funds strategically for public improvements that support qualified private and nonprofit projects that are in the community interest; investigate the need for protocols and mitigation guidelines for code compliance to establish a clear and simple process for adaptive reuse in accordance with national standards customized to individual circumstances.

---

Grove Arcade, Battery Park Avenue between Page and O’Henry

The Grove Arcade is one of Asheville’s architectural treasures, and its rehabilitation represents a landmark achievement in Downtown’s revival. Built in the 1920s as a public market by chill tonic magnate and ubiquitous Asheville-area developer E.W. Grove, the building was converted into a federal office building during World War II, and vacated in the 1980s. Asheville government, business, and community leaders collaborated to acquire the building from the GSA with preservation covenants held by Preservation North Carolina. Structuring and financing of the project was complex, entailing partnerships among the City, private for-profit developers, the nonprofit Grove Public Market Foundation, and HTC investors. The rehabilitated building opened to the public in 2002, containing retail, restaurant, office, and apartment units. The Grove Arcade is the largest historic building rehabilitation in Western North Carolina and among the largest in the state. (Grove Arcade above, circa 1965 photo courtesy North Carolina State Historic Preservation Office; photos of “after rehab” appear on page 9.)
SIDEBAR: Tax Benefits for Historic Preservation Easements

A historic preservation easement is a voluntary legal agreement, typically in the form of a deed, which permanently protects a historic property. Through the easement, a property owner places restrictions on changes to the historic property. A qualified organization that holds the easement works with the owner to create the terms of the easement and insure its lasting effects.

A historic property owner who donates an easement in perpetuity may be eligible for tax benefits, such as a federal income tax deduction for a charitable contribution. The Preservation Society of Asheville and Buncombe County and Preservation North Carolina are both familiar with this and other creative means of preserving historic properties through voluntary real estate transactions.

Properties in Asheville that enjoy permanent protection through easements include the Young Men’s Institute, Ravenscroft, the Grove Arcade, the Minnie Alexander House, Wall Street properties, the Lillian Exum Clement Stafford House, The Gudger House, Sallie Lee Cottage, Rice-Brown House, The Manor Inn, and Richmond Hill (since lost to fire). Properties outside Asheville in Buncombe County under a preservation easement include the S. J. Ashworth House (Fairview), Reynolds Mansion (Woodfin), Brigman-Chambers House (Reem’s Creek), and Old Town Hall (Black Mountain). (Many farms in Buncombe County are protected by agricultural easements, which work similarly.)

For more information, consult the Preservation Society’s website, www.psabc.org.

James M. Campbell Building, 18 Church Street
This 1890s commercial building housed a variety of retail uses, including carpet, bicycle, and auto part sales, and the International Order of Odd Fellows occupied the top floor meeting hall for several decades. By the 1980s, a bank had gutted the lower floors and removed the storefront glass. Asheville residents Brian and Tiffany Lee rehabilitated the building in 2010-2011 to house The Altamont, a black box theater and performance venue, with upstairs apartments. The LEED certified rehabilitation designed by Glazier Architecture included installation of a new storefront and solar hot water system.
CHAPTER 5

ASHEVILLE’S HISTORIC NEIGHBORHOODS

INTRODUCTION

Many of Asheville’s significant historic resources are found within its distinctive neighborhoods. This chapter reviews how neighborhoods are currently perceived and treated and how neighborhood character can be recognized, respected, and enhanced under differing circumstances. Key strategies involve (1) supporting small area planning in neighborhoods that incorporates attention to historic preservation and encourages consideration of National Register or local historic district designation; and (2) making use of the “neighborhood conservation overlay district” tool as an alternative to a local historic overlay district.

In preservation terms, the question is how to maintain the character of existing historic neighborhoods (regardless of any official historic designation) as the city’s population, tourism, and supporting land uses all grow. Meeting these needs as the city continues to grow could pose threats to historic structures. Buildings might be adapted or enlarged inappropriately or removed in order to build more intensively. Even new infill development, if insensitively designed, can affect a neighborhood. Growth can also have other negative impacts that harm residential neighborhoods, such as increased traffic and noise.

While a locally designated historic district is designed to help address many (though not all) such issues, in Asheville, many neighborhoods have traditionally been reluctant to seek designation. This is due in part to the perceived and sometimes real economic hardship associated with preservation practices and also in part to the perceived and sometimes real regulatory burden for property owners and developers. The “neighborhood conservation overlay district” allows neighborhoods to strike a balance working with the planning department to identify character-defining aspects of their community that are most important to protect.

An example of high Victorian architecture in Asheville’s Chestnut Hill National Register Historic District, 76 N. Liberty (ca. 1890). The building’s unusual multiple gables have rare flared eaves and its elaborate porch features turned posts, a scroll-bracketed cornice above a ladder frieze, and a Chinese-Chippendale-like balustrade. (Photo courtesy Heritage Strategies, LLC)
Asheville and development a regulatory process to conserve the features that will preserve their quality of life. A good planning process will allow neighborhood dialogue to work through various issues and create a customized approach appropriate to each.

Chapter 8 recommends developing a “neighborhoods trail” version of Asheville’s Urban Trail as a new way to connect neighborhoods to the arts and support Asheville’s other efforts to weave connections among neighborhoods into its city transportation and parks/greenway frameworks.

**NEIGHBORHOOD PLANNING IN ASHEVILLE**

Asheville has a tradition of neighborhood activism. More than sixty neighborhoods are documented (see map, pages 40-41) and the city has a special coordinator in the city manager’s office to work with them in addressing their needs and concerns.

To date, however, formal planning for neighborhoods on a fine-grained level has been sporadic.

The city’s 2005 comprehensive plan, *Asheville 2025*, does not address neighborhood-level planning needs uniformly across the city. As documented in that plan’s Appendix A, many participating in the planning process expressed desires for working more expansively at a neighborhood level – fourteen of the ninety-four comments under “land use” and “other” expressly mentioned the word “neighborhood.” The plan does, however, urge both the police and parks and recreation departments to work on the neighborhood level, and calls for small-area planning for “the area around and including the Health Center” (p. 157) and areas around the University of North Carolina at Asheville (p. 158).

Asheville has developed a modest practice of “small area,” corridor, or neighborhood planning, having completed and adopted plans for the following parts of Asheville, as found on the city’s website:

♦ Broadway Corridor
♦ Charlotte Street
♦ Haywood Road Corridor
♦ River Redevelopment Plan
♦ Shiloh Neighborhood Plan
♦ West End/Clingman Avenue (“WECAN”)
♦ Wilma Dykeman RiverWay Plan

At least three of these plans are less about neighborhoods where people live and more about corridors that impact multiple residential neighborhoods, especially Charlotte Street and Broadway Corridor. These are examples of an important approach for resolving one of the issues raised in public discussion for this master plan, the potential impact of expanding commercial corridors on surrounding residential neighborhoods. (See Chapter 2, Recommendation 2.11.) The Haywood Road Corridor is a hybrid, addressing both West Asheville as a single neighborhood
The Burton Street neighborhood also has a plan. In 2010, the Burton Street Community Association worked with the Asheville Design Center, the Western North Carolina Alliance, and the Appalachian State Geography Department’s summer program to create a neighborhood plan. Perhaps because the city was not directly involved in the plan’s development, it has not been officially adopted.

As noted in Chapter 2, most of these neighborhoods – and other areas with clusters of significant but officially unrecognized historic resources – are not protected by local regulations addressing their special character. For the most part, only the local Unified Development Ordinance (including demolition by right) and code enforcement apply. The four local historic districts are subject to review processes by the Historic Resources Commission as authorized under Asheville’s municipal ordinance and are intended to help preserve and enhance their unique character.

**Issues, Opportunities, and Recommendations**

**Neighborhood Character and Quality of Life**

It is important to identify and recognize neighborhood character so that it can be protected and enhanced, so that it may continue to contribute to quality of life, community memory, and a sense of local place. This includes not only structures but also how the landscape in the public domain is cared for – including trees, sidewalks, street furnishings, and public art.

The challenge of maintaining neighborhood character as owners maintain and improve their properties can be a large one, even without the added challenge of new construction. New construction in neighborhoods must be assumed. Added density in existing neighborhoods is an official city strategy for providing

**Historic Districts in Asheville**

Fourteen residential and commercial neighborhoods have been designated as National Register historic districts and/or as local historic districts (see map, page 8, and table, page 20). Except as noted, all listed here are National Register only:

- Albemarle Park (local and National Register)
- Biltmore Village (local and National Register)
- Chestnut-Liberty
- Clingman Avenue
- Downtown
- Grove Park
- Montford (local and National Register)
- Norwood Park
- Proximity Park
- Riverside Industrial
- St. Dunstan’s (local historic district only)
- Sunset Terrace
- West Asheville-Aycock School
- West Asheville-End of Car Line
affordable housing and accommodating residential growth. Such a “smart growth” strategy respects existing, under-utilized local infrastructure and recognizes an important way for the city to grow, prosper, and sustain itself.

As the city’s policy for added residential density implicitly shows, as Asheville grows its population with a limited land base, more intense land use is to be expected. Both population growth and the need for greater affordability are givens, as is a rising level of tourism. Such growth can be good news if its energy is channeled well. Old buildings can be repurposed and rehabilitated. As the city is primarily low-density and there are many non-historic structures and areas where redevelopment would be desirable, there is plenty of room for more infill and intensive development, generally speaking. Compatible, affordable new housing can be built on vacant lots, helping to stabilize more neighborhoods with more investment. More people can help pay the bills for the same infrastructure, and support local businesses.

Neighborhood residents frequently oppose higher density infill development when they see it as incompatible with the character of their neighborhoods, regardless of designation. More extended neighborhood planning could engage residents in managing density and other issues – such as helping to identify locations where added density would be welcome and ways to achieve compatible new construction.

In addition, the planning, public outreach, and education should also allow continued identification of neighborhoods for listing in the National Register of Historic Places and for local historic district designation, where appropriate.

For neighborhoods that engage in such planning but that do not wish to seek official historic designation, use of a Neighborhood Conservation Overlay District (NCOD) could be one implementation step. NCODs are based on an existing North Carolina law, the same section that allows the overlay district administered by the Downtown Commission. They allow identification of character-defining features and development of customized design guidelines to preserve the important qualities as identified by the neighborhood and local governing body. Similar to locally designated historic districts but less restrictive, NCODs allow neighborhoods to focus on particularly important features or characteristics regardless of historic authenticity. Administration is worked out according to a local jurisdiction’s criteria concerning resources and administrative feasibility. The addition of this program in Asheville would not replace local or National Register designation – it simply adds to the toolbox where appropriate. See details in the sidebar beginning on page 43.

**Strategies**

With its existing *Asheville 2025* city development plan nearing the ten-year mark since its completion in 2005, the city is about to embark on an update to the comprehensive plan. As it does so, it has a major opportunity for a shift to a new level of attention to neighborhood planning.

Enlarging on Asheville’s experience of small-area plans and applying ideas here over time to most or all neighborhoods would
allow periodic comprehensive planning to be more strategic, with detailed planning delegated to small-area and other focused planning.

Much of Asheville contains older structures. Many unsurveyed neighborhoods are expected to contain historic resources even if they may not be eligible as historic districts. Thus, the HRC conceivably could affect many neighborhoods across the city; a recommendation in Chapter 2 is to conduct a reconnaissance survey to help with setting priorities for more in-depth surveys of historic resources, which could help to identify additional neighborhoods for closer study and additional locations to encourage good stewardship through information and technical assistance.

This historic preservation master plan, however, focuses only on neighborhood planning for predominantly residential neighborhoods already listed in the National Register or otherwise identified as eligible. Even with enlisting consultants and partners as appropriate to help with this work, the HRC will need more staff time to accomplish this. If Asheville commits to intensifying outreach to still more neighborhoods, even more staff resources would be needed.

Neighborhood planning has great benefits. For historic preservation, neighborhood-based planning and outreach can result in improved community-based understanding and dialogue concerning opportunities for surveys of historic resources and follow-up measures for greater recognition, stewardship by private owners, and community-based protections. It can also improve overall planning outcomes by enlisting deeper local knowledge. It is an excellent way for building greater appreciation for neighborhood and city-wide needs, resulting in greater public support, more efficient city investment, and more effective dialogue – in advance, at a neighborhood level – about important, but potentially conflicting values in terms of housing affordability, density and use, infill development, and compatible design. In addition, the process may bring to light more volunteers, partners, and private resources.

Neighborhood initiatives should also tap into residents’ desire for sustainability, creativity, and opportunities for residents to contribute to improving their community. “Make historic preservation cool” was the advice from the focus group reviewing neighborhood needs – which went on to add, “The problem is that historic preservation tends to [attract] older people. [We] need to engage younger

Neighborhood Conservation Overlay Districts – A Potential New Tool for Asheville’s Neighborhoods

A neighborhood conservation overlay district (NCOD) is a zoning tool used to preserve, revitalize, protect, and enhance significant older areas within a community beyond what is specified in the standard code. The conservation overlay regulations are applied in addition to standard zoning regulations. NCOD regulations will differ from neighborhood to neighborhood depending on the area’s character and needs.

NCODs versus Historic Districts: Both NCODs and historic districts are overlay districts; however, NCODs will typically regulate fewer features and will focus more on significant character-defining features, such as lot size, building height,

(Continued on page 44)
people by including environmental issues, arts, kids, streetscapes, walkability, broader issues; people like design diversity in design [and] livability.” For this reason, we strongly urge incorporating community story-telling and the arts into the more commonly understood version of neighborhood planning. This is another means of advancing historic preservation and building a sense of identity and community (as further addressed in Chapter 8).

No matter the level of resources to be made available over any given timeframe, implementation will take time. Neighborhood expectations and participation must be managed accordingly. Existing neighborhood plans in Asheville have been carefully crafted and have taken considerable time and resources to complete. Thus, we recommend simpler steps as pre-planning strategies that can energize neighborhoods and help to recruit supplementary resources – partners, fundraising – and stimulate early action addressing high-priority needs without necessarily pursuing entire plans.

For a “cool” name, call this initiative “Complete Neighborhoods” – playing off the widely admired “Complete Streets” concept that asks communities and transportation agencies to consider all issues, users, and stakeholders in their transportation planning, not simply vehicles and their need to move goods and people from here to there. Similarly, neighborhoods combine a wide range of issues and stakeholders and require innovative thinking.

Working out the specifics of this “pre-planning” process should involve the planning staff and other city leaders, perhaps in partnership with many potential partners (e.g., Asheville Design Center, Appalachian State’s Geography Department, and others interested in supporting planning in Asheville). Needs and ideas in the following areas should be rapidly assessed:

- Arts and historic resources;
- Livability and community character, including adjacent neighborhoods’ land uses, in particular addressing compatible changes in use and density of development to meet housing and other community needs;
- Public safety;
- Mobility and complete streets (transportation, streetscaping, pedestrian access, etc.);
- Infrastructure (including measures to improve impacts of runoff on water quality in local streams);
- Affordable housing;
- Community cohesion; and
- Play/recreation/green space.

Based on each neighborhood’s needs assessment, each could then create a simple action list, a “plan on a page.” Following are ideas for discussion:

- Community strengths, weaknesses, opportunities, and threats;
- Top-priority needs;
- One to two early actions (to be accomplished over one to two years);
- What the neighborhood can do for itself;
- How the neighborhood could meet its needs outside its own boundaries;
- What resources the neighborhood can call upon, in terms of volunteers, funds, and partnering organizations beyond the city’s contribution;
- What the city can do to assist;

(Continued from page 43)

setbacks, streetscapes, and tree protection. Unlike historic districts, NCODs rarely consider specific elements, such as windows, building materials, colors, and decorative details. In addition, most NCODs do not include demolition delays, a tool utilized in historic districts.

The following information is provided in order to give readers an idea of how the state legislation applicable in Asheville has been made to operate in other North Carolina cities.

NCOD Criteria: Chapel Hill has the following requirements:

- Area must include one block face (all lots on one side of a block, at a minimum)
- Area must have been developed at least 25 years before applying for an NCO
- 75% of the land in proposed area must be presently improved
- Area must create a consistent setting, character, or association by possessing at least one of the following:
  - Scale, size, type of construction, or distinctive building material
  - Lot layouts, setbacks, street layouts, alleys or sidewalks
  - Special natural or streetscape characteristics (i.e., creek beds, parks,

(Continued on page 45)
• The level of interest in engaging in formal historic preservation activities, including: surveys, National Register listings, protection for community character (either a new Neighborhood Conservation Overlay District option or the existing option of a local historic overlay district), and addressing needs of owners seeking help in stewardship of their historic properties;

• Ways to organize further to advance the work plan, action, and long-range planning, including the neighborhood’s own next steps and assignments; and

• Ways to begin collecting neighborhood stories.

Following are simple strategies drawn from the preceding discussion.

5.1 Undertake one to three pilot projects to engage in neighborhood planning (predominantly residential neighborhoods already listed in the National Register or others identified as eligible) to work out the most effective and streamlined approach to the ideas suggested in this plan:

5.1A Conduct a neighborhood needs assessment.
5.1B. Hold a workshop session for each community and create a simple one page worklist for each community session.

5.2 Use the neighborhood needs assessment and neighborhood “worklist workshops” as one basis for the city’s next comprehensive plan. Develop greater city funding and staff capacity to support neighborhood needs assessment and neighborhood “worklist workshops” and undertake formal neighborhood-based and small-area plans. Enlist partnering organizations in the planning process.

5.3 Add “neighborhood conservation overlay district” to tools for implementing small area plans. (See sidebar beginning on page 43.)

5.4 Consider special overlay district zoning for “gateways” to selected districts affecting historic neighborhoods. (Repeated in Chapter 2)

5.5 Develop implementation and coordination strategies for city agencies to respect and support policies put forth in adopted small area plans.

Housing Repair and Affordability

Not all property owners have the skills and appreciation to care for older buildings and materials. Ready access to the knowledge and resources required to care for their older properties would assist many owners. For lower-income homeowners, in particular, the burden of maintenance needs to be minimized. Following are strategies tailored to local needs and possibilities. In-depth knowledge about the extent of the challenges, needs, and customer base could assist in documenting the need for additional grant funding to create more robust programs in Asheville and help to refine the following strategies.

Strategies

5.6 Support the Preservation Society of Asheville and Buncombe County (PSABC) and other preservation partners in developing a continual hands-on training program for owners of historic properties in caring for historic buildings. Conduct homeowner workshops where qualified craftsmen demonstrate how to maintain and repair historic fabric, directly in neighborhoods to maximize accessibility and neighborhood support.

5.7 Support PSABC and other preservation partners in creating a program to advise homeowners on appropriate design and historic preservation practices.

(Continued from page 44)

gardens, street landscaping)
◊ Land use patterns, including mixed or unique uses or activities
◊ Abuts or links designated historic landmarks and/or districts
◊ Area must be mostly residential in nature and character

NCOD Steps for Formation:
Winston-Salem has the following requirements:

• Pre-application process (to determine eligibility)
• Submission to planning staff to include:
  ◊ Boundary of proposed district (identify each property within the district)
  ◊ Written endorsement by the Neighborhood Association Executive Committee and a copy of the current by-laws
  ◊ Original petition (signature of 55% of property owners in district)

If this is approved in Winston-Salem, the following steps may continue:

• Inventory
  ◊ Description of natural and built features of area/neighborhood (two maps supplied by planning staff – National Register district neighborhoods may be included)
  ◊ Planning staff to review to make sure properly completed

(Continued on page 46)
Shiloh is among the neighborhoods that have completed small area plans. Shiloh’s plan, however, did not prevent later infill construction (lower photo) out of character with the neighborhood, suggested by the upper photo. Neighborhoods may use small area planning to consider such mechanisms as a locally approved historic district or the new idea of a Neighborhood Conservation Overlay District (see sidebar beginning on page 43) to carry out goals for neighborhood development identified through neighborhood dialogue. (Photos by Heritage Strategies, LLC)

(Continued from page 45)
• Conservation Standards list
• Voluntary Guidelines list (if desired by area/petitioners)
• Final Submission, Notification, and Adoption (Neighborhood Association is to monitor/maintain district – city staff is involved for building permit/rezoning/subdivision of land)

Source and further references: See reference section at the end of this report.

5.8 Support A-B Tech and other preservation education partners in developing hands-on training for specialty trades and proper historic preservation maintenance and repair skills. Develop a volunteer outreach program for property owners in need of such assistance.

5.9 Continue PSABC’s program of maintaining a list of qualified contractors and artisans working with historic buildings and trades and provide a link on the HRC website.

5.10 Explore special property tax rebates, grants, forgivable loans, or other financing mechanisms to support critical home repairs by historic-property owners with limited incomes.

5.11 Publicize the availability of assistance to low-income residents through the city’s HOME program and Habitat for Humanity’s Home Repair program on the HRC website.
CHAPTER 6

ASHEVILLE’S BUSINESS DISTRICTS

INTRODUCTION

When asked to consider Asheville’s business districts, most readers are likely to think first of Asheville’s distinctive Downtown commercial district – including a thirty-three-block area listed in the National Register of Historic Places. They will probably also think of long-time destination Biltmore Village – both a National Register and locally regulated historic district. More recently, the creative energies that are on view in Downtown and Biltmore Village have spilled over into other places – the River Arts District, West Asheville, and other smaller commercial areas.

The good news is that historic preservation has generally been woven into the actions many have taken to develop their businesses and properties in all of these districts as a matter of prudent practice.

It is easy to see that Downtown’s business “ecosystem” – supportive of independent small businesses friendly to tourism and the arts mixed with a wide variety of other users drawn to Downtown for its existing qualities – is dependent on its buildings. Older, smaller scale buildings are important to the successful business mix that exists there now, and their preservation enhances the likelihood of its continuation. The same is true of the other major commercial areas, each of which has evolved in response to the possibilities of its “recyclable” buildings as well as its location and customers.

For 21st century Asheville, these commercial nodes offer an armature for the sculpting of a growing city with many more residents and businesses serving many more visitors and other kinds of economic activities, well beyond the current 85,000 residents and 3.1 million overnight visitors (see sidebar on Asheville’s predicted growth, page 10). Rather than focus on a single core, Asheville will be

The S&W Cafeteria, beloved Downtown icon designed by Douglas Ellington. (Photo courtesy Heritage Strategies, LLC)
National Register Recognition of Downtown Asheville

Thirty-three blocks of the commercial core of Downtown Asheville and closely associated residential areas are listed as part of a Historic and Architectural Multiple Resource Area (MRA) nomination, commonly called the Downtown Asheville National Register Historic District. The nomination includes the historic district and eleven non-contiguous individual resources and catalogues approximately 244 contributing resources and sixty noncontributing resources. The district is deemed locally significant for its association with architecture and commerce.

In 2012, the end point of the listing’s period of significance was extended from circa 1940 to 1961. (The period of significance begins in the 1840s.) Good examples of Commercial Style and Modernist-influenced commercial buildings in the original district that were previously outside the period of significance are now contributing resources within the district. This expansion of the Downtown Asheville Historic District augments the original district by reflecting the continuity of development in the commercial heart of Asheville through the mid-twentieth century.

Since the federal historic tax credit program began in

(Continued on page 49)
existing businesses with a focus on placemaking and enabling them to grow as destinations through planning, process, and projects. Establishment of the River Arts District Commission – and the Downtown Commission before it – to focus leadership and continual community-based planning energies is an example of “process.” Following is a brief discussion of the status of the four major historic commercial areas, Downtown, Biltmore Village, River Arts, and West Asheville.

Downtown

In the same timeframe that many communities have experienced revitalization, Asheville’s Downtown has pursued its special blend of revitalization accomplished through focus on a unique historic district, the involvement of innovative and entrepreneurial leaders, and the economic leadership of small businesses, the arts, and tourism.

The renaissance of Downtown’s story starts with the classic story of decline and disrepair followed by the rediscovery of its architectural jewels, and the subsequent involvement of visionary entrepreneurs and community leaders who laid down a foundation of possibilities in the 1970s and 1980s. In addition to these pioneers, four major factors contributed to Downtown’s revival.

(1) Historic preservation played a critical role in this story from the beginning, with the establishment of the Historic Resources Commission in 1979 by Asheville and Buncombe County and its publication (with the help of the State Historic Preservation Office) in 1981 of Cabins & Castles. That guidebook highlighted architectural assets in the Downtown and throughout the city and county. The Asheville Revitalization Commission, formed in 1977, also issued a plan in 1978. When a national developer unexpectedly arrived in town in 1980 with a development idea, featuring a “downtown mall” (larger than the Asheville Mall) and a convention hotel and office tower that would have removed eleven blocks (seventeen acres), many were ready to listen.

The public’s 2 to 1 vote against a bond referendum to support the project, however, settled the community’s commitment to Downtown’s existing, historic resources, as Leslie Anderson (and co-authors) recalled in a 2006 article for Popular Government:

The proposed downtown mall provoked an important debate about the future of downtown and caused the citizens of Asheville to organize and become involved in downtown issues. However, in the wake of the referendum, there were deep, open wounds created by fiery, targeted civic discourse...Civic energy was depleted. Ironically, out of this difficult period emerged an important positive legacy: a catalyzing of the historic preservation movement in Asheville. Loudly and clearly, voters sent the message that they favored saving downtown’s existing building stock over constructing new buildings.

(Continued from page 48)

1976 and the state program in 1998, sixty-eight contributing historic buildings in the Downtown Asheville National Register Historic District have been rehabilitated according to the Secretary of the Interior’s Guidelines, at a reported value of nearly $142 million in 2014 dollars.
Such support encouraged the city to establish strong commitment to revitalization. Ultimately, the city and private partners recruited millions of dollars in local, state, and federal revitalization funding to support many public and public-private projects.

(2) The boost provided by the federal Historic Tax Credit (HTC), created in 1976, became evident soon after. When North Carolina’s companion HTC took effect in 1998, Downtown was ready for a second great leap forward. For the next ten years, as documented in Chapter 4’s further discussion of the HTC, Downtown boomed.

(3) What also made an enormous difference in those early years was that the city established modest, concentrated staffing in the form of what was ultimately known as the Downtown Development Office (DDO). The office began in 1981 with the hiring of one staff person to focus on economic development for the Revitalization Commission. The city even housed the DDO’s staff (kept deliberately small, to encourage partnerships with other city agencies and the private sector) in the midst of the lively business scene that was taking hold.

Though Asheville was too large to qualify for selection as a Main Street community, the DDO modeled its work on the proven Main Street Four-Point Approach®, which guides communities to (1) organize for success, (2) improve design, (3) promote their Main Street, and (4) enhance their economic base. The National Main Street program operates today in some 2,000 historic commercial areas across the country.

For more than fifteen years, the DDO helped property owners and business owners collaborate and exceed their individual efforts. As Leslie Anderson, DDO manager from 1986 until 1996, has said, “Downtown Development Office staff played a variety of roles, including project managers, planners, business recruiters, matchmakers, nonprofit managers, cheerleaders, party-givers, fundraisers, parking managers, marketers, and dreamers. The office had responsibility for coordinating projects and communicating with all partners and the general public. The staff coordinated some city projects directly, assisted other city departments in their projects, and supported allied organizations in their activities.”

(4) Finally, during the same timeframe as the establishment of city staffing focused on the Downtown and with some of the same players involved, the city developed considerable expertise in offering city-sponsored events, and enabling other events to take place. As the National Main Street Center points out on its website, special events are a critical element of the “promotion” point.

The development of a city-county tourism program in this same timeframe also played a critical supporting role, as discussed further in Chapter 8. But while today we can see that Downtown was the key potential destination outside Biltmore, Biltmore Village, and the Grove Park Inn, back in 1981 it was far from attractive.

Today, events in Downtown and elsewhere are so widespread, continuous, and successful that the city’s long-time anchor event Bele Cher was recently
discontinued in favor of more dispersed events and more events sponsored by non-city agencies. The Asheville Downtown Association, which was founded during the early years of the DDO, now produces a number of major events, including Easter on the Green, Downtown After 5, Asheville Oktoberfest, the Pritchard Park Cultural Arts summer series, and the Asheville Holiday Parade and JingleFest.

Ten years into the sustained period of investment in historic structures that bloomed after 1998, the city realized the desirability of consolidating Downtown’s gains. It saw an even more vibrant future, but also recognized potential conflicts looming between the homegrown downtown business community with its unique “vibe” and big, outside players seeking a piece of this new action. Thus was born a major plan, the Downtown Master Plan (DMP). The expectation at the time was that the economy was on a continuous upswing. At the end of 2008, however, economic activity ground to a halt nationwide with the start of the Great Recession. Asheville suffered comparatively less than many other cities, perhaps because small businesses dominate the local economy, a factor in economic resilience. Since 2008, the city has seen the completion of several new projects, Indigo and Aloft hotel properties among them; others entered a long gestation period, only just now beginning to emerge. The DMP, true to its intent, has served as a guide to a number of changes over the past five years. As expected growth takes hold, potential conflicts could still loom.

**Biltmore Village**

Biltmore Village was constructed in the 1890s and 1900s by George Vanderbilt as the “manor village” for workers and businesses related to Biltmore. It largely possesses a quintessential English Tudor Revival style with heavy timbers and Asheville’s delightful version of “pebble dash” stucco – developed by Richard Sharp Smith, supervising architect for the Biltmore Estate, who went on to develop many other buildings across the city.

Biltmore Village retains a village feel with its small-scale buildings, walkable streets and sidewalks, and mature street trees. A railroad station, today a simple family restaurant, marks the spot where George Vanderbilt first alighted in the village of Best, to fall in love with the Asheville region. Not far from the station and largely out of view from the village, and separated from it by active rail line, is the Swannanoa River. The river flows west to join the French Broad in its northwesterly flow toward Tennessee, and the village was built on flood plain.

Biltmore Village was one of the state’s earliest designated National Register historic districts, and the second to be so designated in Asheville, in 1979 (after Albemarle Park). It was designated as a locally protected historic district in 1987. Design guidelines for the district were put in place in 1988 and are still in use. The Biltmore Village Development Plan was completed in 1992. A Business Improvement District (BID) also once covered the area, raising funds from a special assessment on properties that provided funding to reintroduce the splendid, uniquely designed light fixtures that once lined the Village streets.

A number of prominent construction projects have been built under the review guidelines. Today a

The designation of Biltmore Village as a local historic district insures that infill development is compatible with the architectural character of this small historic commercial village. Visitors love the historically inspired version of their favorite source of French fries! (Photo courtesy Heritage Strategies, LLC)

nation, the\r

historic dis\r

trict offers\r

visitors a unique\r

modern McDonald’s\r

reflecting the Tudor\r

Revival style, in stark\r

contrast to the\r

standard corporate\r

architecture of the\r

chain.

In addition, the\n
Amoco gas station and\n
pump shelter and a\n
Hardee’s, both near\n
the iconic All Souls\n
Episcopal Church\n
(1896, by Richard\n
Morris Hunt) were\n
constructed with\n
compatible materials\n
and colors. A recently\n
constructed boutique hotel, the Grand Bohemian, reflects the style and spirit of the\n
original village—among much other new, compatible construction.

Because it is next to the entrance to Biltmore, this area is highly attractive to the\n
estate’s visitors, estimated at a million a year, whose profile includes generous\n
disposable income. Consequently, some of the nation’s best known higher-end\n
franchises, from Ruth’s Chris Steakhouse to Talbot’s and Chico’s clothing stores,\n
have found comfortable locations here, side by side with popular local restaurants\n
and retail operations. The district clearly demonstrates the symbiosis among\n
buildings, businesses, and the economic dynamism offered by tourism—and the\n
benefits of using a unique style as the basis for guiding continued, compatible\n
development. Because so much has been accomplished under the guidance of the\n
historic district, few property owners appear to chafe under the regulatory\n
environment in which they operate. In fact, its success was held up as a model for\n
considering local historic district designation for Downtown during the public\n
scoping done for this plan.

River Arts District

The Downtown turned out to be a hidden asset when Asheville needed it most—after a lackluster economic afterglow from the retirement of the city’s longstanding municipal debt in 1977, followed by the nation’s economic doldrums of the 1980s. The River Arts District, a 1920s-30s industrial district listed in the National Register in 2004, is providing a second-generation version of the same story as the Downtown’s. As a gritty industrial district lacking high architectural style, it is perhaps an even more surprising revival, the product of much work over many years.

The district is situated along the east bank of the French Broad River, downstream from its confluence with the Swannanoa; it is just 1.1 mile from the district’s traffic circle at Haywood Road and Roberts Street to Downtown’s Patton-Lexington Avenue intersection. Proximity to a water source and the availability of level building sites lured the city’s early industry down to the area, after the railroad’s arrival in 1880. According to the district’s National Register nomination, “The Southern Railway constructed its passenger and freight depot, along with a roundhouse and maintenance facility, to the south of the nominated district and
stimulated the development of the area as Asheville's primary commercial and industrial district. The river district bustled with numerous manufacturing plants, textile mills, coal and lumber yards, wholesale businesses, and warehouses, along with various retail establishments and scattered dwellings.”

Although the location, resources, and visionaries are quite different, the district’s story of revival is similar to Downtown’s. Instead of entrepreneurs, pioneering environmentalists envisioned a greenway along the French Broad, and instead of restaurateurs (in the beginning, anyway) and retailers, artists first filled vacant old (industrial) buildings. In the process, Asheville as a whole embraced the emerging possibilities. The city began major planning and investment to clear brownfield sites (saving an iconic stack from an old ice house in the process), deal with transportation challenges in the area (rail use remains active), complete the greenway and make other pedestrian connections, and enable new high-density residential and commercial construction on vacant land. It is also currently working to save a bridge in the district that appeared in the movie Thunder Road. Close by the district – across the river and further away from the ageing railyard – New Belgium Brewing has broken ground on a state-of-the-art facility. A River Arts District Commission was established to enable planning and was recently merged with the River District Design Review Commission.

West Asheville

As surprising in its own way, and just as unique as Downtown and the River Arts District, West Asheville is a sprawling former small town of modest homes and commercial buildings exhibiting a strong 1930s-1940s flavor. It is divided from Asheville proper by the French Broad River. Downtown and West Asheville are roughly the same distance from the River Arts District. Haywood Road, a major thoroughfare leading west from Downtown, forms the spine of the area. Two small historic districts along the road were listed in the National Register in 2006, West Asheville End of Car Line Historic District and the recently expanded West Asheville-Aycock School Historic District. A few single sites have been listed separately in the National Register and others have been listed by the North Carolina SHPO for further study. A considerable number of residential and commercial properties have also been surveyed in the area; in 2004 a large

How Do Form-Based Codes Relate to Historic Preservation?

As explained by Phillip Walker in Planning magazine in 2014,

The primary difference between a local historic district and a form-based code, or FBC, is that historic district guidelines are applied as a design review ‘overlay’ district that is superimposed over the underlying ‘base’ zoning, leaving all land-use and density provisions of the base zoning intact. Design-related standards supersede those of the underlying zoning, including building setback and height requirements. In contrast, FBCs become the new base zoning by addressing land use and design in a more comprehensive and integrated manner, with use issues taking a back seat to physical form.

However, Walker adds,

While FBCs may be able to trace their bloodlines to historic district guidelines, they are an inadequate substitute for historic district overlay zoning for a community’s most important historic areas. ‘I would never recommend that form-based codes should completely replace historic districts in locations worthy of historic district regulations, but they can be a very complementary tool and make the preservation effort more objective,’ notes Daniel Parolek, principal of California-based Opticos Design and a leading practitioner of FBCs.
residential neighborhood, Horneyhurst Historic District, was entered into the study list.

According to the West Asheville-Aycock School Historic District nomination to the National Register, the two districts represent “a rare concentration of historic commercial and civic buildings on Haywood Road, the established spine of the West Asheville community. Significant individual historic resources also remain along Haywood Road, including several churches and the former Friendly Grocery, but these are separated from the two districts and from one another by substantial gaps of modern infill buildings or heavily altered historic structures. Built along the route of the old Western Turnpike from Asheville to Waynesville in Haywood County, Haywood Road takes its name from its western destination. West Asheville, an incorporated town through much of the 1890s and again in the 1910s, was annexed by the City of Asheville in 1917. Haywood Road developed as the principal commercial corridor in West Asheville, and beginning in 1911 it also served as the route of a streetcar line from Asheville’s bustling Depot Street area. The streetcar turnaround point was located in the 700 block of Haywood Road until streetcar service ceased in 1934.”

Today the entire area comprises a clearly revitalizing commercial road backed by pedestrian-scale neighborhoods filled with charming small homes and large street trees. Both homes and commercial buildings represent affordable space for householders and businesses priced out of other areas with higher rents and mortgages. The artistic sensibilities of the entrepreneurs who have found their way to this area have resulted in both historic preservation and a delightful eclecticism in presenting their businesses and attracting and serving their customers. It is, in its own special way, as unique and exciting as both the Downtown and the River Arts District – at a much smaller scale, and therein may lie the challenge, as developers with deeper pockets and larger-scale ideas join in.

Happily, as with both Downtown and the River Arts District, the city has responded with innovative planning. A small area plan done some years ago with the participation of both residents and business owners encouraged a major model project to develop a customized form-based code for the area (see sidebar on page 52). Work began in 2013 with consultant Lee Einsweiler of Code Studio. The emerging product demonstrates a clear commitment to historic preservation, recognizing the need to reconcile the actual development pattern of the area with existing zoning under Asheville’s Unified Development Ordinance. That code currently permits development that does not conform to the current pattern in terms of scale, setback, and other concerns, which could all too readily spoil the area’s collective appeal.

**ISSUES, OPPORTUNITIES, AND RECOMMENDATIONS**

**Historic Preservation in Downtown Asheville**

New development carries with it certain trends that make it more likely to be incompatible with Downtown Asheville’s historic character than compatible. As
technology, engineering, materials, demand, and tastes have changed, and as Asheville in particular has grown at long last into the larger city envisioned at the turn of the 20th century, with its great popularity for investment, the way that commercial buildings are conceived, designed, and constructed has changed. They are more likely to be larger in scale than many existing buildings, and standard approaches are influenced more by developers’ experience in suburban office parks than by consideration of Asheville’s particular qualities. Accommodating the automobile – parking, circulation – will be a continued challenge as traffic volume increases with downtown growth.

Recognizing the special nature of Asheville’s Downtown and communicating that nature as a part of popular culture is one way to address this issue – putting owners, investors, and developers on notice that the qualities that have evolved in the Downtown over time deserve consideration and that the Downtown’s continued evolution should lead to further enhancement of those qualities. This can be expressed in interpretation and public investment in placemaking as well as in policy and procedure, and in continued public dialogue about the value of Asheville’s historic resources.

Design review embedded in the regulatory process, the topic of this section, is another way to ask owners, investors, and developers to consider the special nature of Asheville’s Downtown.

The Downtown historic district is universally acknowledged today as one of Asheville’s premier assets. Yet, it remains more vulnerable to change than many of the nation’s great historic districts – in such places as Denver, Pittsburgh, Kansas City, Seattle, or Portland.

As one commentator stated during scoping for this master plan, “at present the greatest limiting factor to [protecting] downtown is the lack of teeth given to [historic preservation]. There is nothing to stop the owners of our most treasured buildings from tearing them down.” While this is true, even historic district or landmark designation can only delay demolition, by up to a year, under state enabling legislation for the local program. Demolition of a commercial building anywhere in the city requires a simple permit and a fee of $150; in the Downtown, for buildings 5,000 square feet or larger, review by the Downtown Commission is a requirement before a permit can be issued.

There is also little to prevent adverse changes to buildings that are kept standing but redeveloped or expanded. The Downtown Commission’s design review guidelines lack substantive language for historic preservation; only buildings whose owners have sought local landmark status undergo review by the HRC, as discussed in Chapter 2.

The Downtown Commission is responsible for reviewing changes to the larger area that includes the National Register district (considered part of the “Downtown Core” within the commission’s larger charge). The commission employs design
review in all cases of change – new construction, rehabilitation, maintenance, and 
additions. The guidelines are carefully crafted to walk the difficult regulatory line 
of preventing the worst cases in terms of design and materials, without unduly 
limiting creativity – which is, after all, inherent in Asheville’s architectural legacy 
and desirable for new construction as it adds to Asheville’s “layers of history” over 
time.

Without getting into the difficult task of commenting specifically on individual 
guidelines, the principal difficulty is not the guidance itself, but the fact that the 
Downtown Commission lacks the ability to make its judgments based on these 
guidelines a matter of legal requirement. “Mandatory design review, voluntary 
compliance” is the shorthand way Asheville universally use to describe the 
process. The Commission’s leverage exists in the permitting process – no permits 
are issued until complete review is accomplished, and variances and conditional 
uses are tools within this process (meaning when the applicant asks for certain 
conditions, the Commission has more leverage). The process was strengthened 
following review during development of the Downtown Master Plan.

**Strategies for Strengthening Downtown Design Review**

For the purposes of coordination and conserving administrative resources, we 
recommend that the Downtown Commission, rather than the Historic Resources 
Commission, be strengthened in its policies and procedures to encourage historic 
preservation in the Downtown by private owners, investors, and developers. This 
includes formalizing a close relationship with the HRC.

The key insight in strategies here is that the choice is not “either-or” – to have a 
historic district, or not. A locally designated historic district is generally considered 
the best practice for achieving historic preservation in historic commercial areas. 
Asheville has a good example of this practice, in Biltmore Village. For the 
Downtown, however, our approach to achieving historic preservation is more 
 nuanced. Strategies below break down ideas typically embedded in local historic 
district administration and consider how to incorporate them individually and 
selectively into Downtown Commission and HRC policies and procedures.

One way to strengthen the Downtown Commission’s ability to make design 
judgments is to employ Neighborhood Conservation Overlay Districts using the 
state law described in Chapter 5. This approach enables customized design 
guidelines targeting those concerns that specifically pertain to the designated area. 
The Downtown Commission can be empowered as the review body. The operative 
state statute, in fact, derives from the same part of the statute as that which 
empowers the Downtown Commission. The five sub-areas delineated in the DMP 
might provide guidance in delineating specific areas in which to employ this 
approach: Traditional Downtown, Beaucatcher Gateway, Patton/River Gateway, 
Eagle/Market, and South Slope (see map on page 38).

For limited areas where the Downtown Commission specifically determines that a 
greater level of historical review would benefit the character of the Downtown, 
establishing smaller local historic districts under the HRC is feasible. This 
recommendation has arisen from analysis of requests to landmark the Jackson 
Building and generally protect the area around Pack Square.

Strategies are listed below in rough order from those that are relatively simple to 
accomplish to stronger actions that will require considerable community dialogue 
and policy-making in order to tailor final decisions to meet local needs and build 
consensus.

6.1 **Insure timely availability of information to support the decision-making 
process:**
6.1A Require projects subject to downtown design review to identify the status of the building in the National Register Historic District as part of the application process.

6.1B Require a recommendation from the HRC to the Downtown Commission prior to issuance of a demolition permit for contributing buildings in the downtown Asheville National Register district. (Amend HRC bylaws to reflect a 60-90 day decision deadline.) (Repeated in Chapter 2)

6.1C Establish a city policy that planning staff should consult with HRC staff in the decision-making process on applications that will affect National Register properties.

6.1D Establish city policy that staff reports to the Downtown Commission will consider the impacts on the Downtown National Register district of proposed action by the Commission. (Repeated in Chapter 2)

6.1E Require applications for new development to identify historic structures in the proposed project’s surroundings and provide visual representation of the proposed project in context with the surrounding historic structures.

6.2 Implement the Asheville wayfinding system’s markers for recognized Asheville historic districts or other markers as appropriate, especially in the downtown Asheville National Register historic district. (Repeated in Chapters 2, 3, and 8)

6.3 Strengthen outreach to property owners to encourage individual local landmark designation where appropriate. Include better information on procedures on the HRC website. (Also addressed in Chapters 2 and 4)

6.4 Strengthen the Downtown Commission’s current guidance with respect to historic preservation, specifically by adopting the Secretary of Interior’s Standards for Rehabilitation for alterations to existing structures that contribute to the National Register Historic District (Appendix B). Allow staff-level review of alterations proposed to follow the Secretary’s Standards to reduce developers’ timeframes, but require DC sub-committee review if the project is not proposed in accordance with the Standards.

The Drhumor Building, designed by A. L. Melton in the Romanesque Revival style, was constructed in 1895 and is one of the oldest commercial buildings in downtown Asheville. (Photo courtesy Heritage Strategies, LLC)
6.5 **Strengthen the Downtown Commission’s ability to make design judgments for projects directly affecting the National Register resources.** Consider establishing one or more Neighborhood Conservation Overlay Districts as described in Chapter 5, enabling customized design guidelines with the Downtown Commission empowered as the review body.

6.6 Investigate establishing small local historic districts where the Downtown Commission has determined that involvement of the HRC is needed to protect their historic character.

**Promoting the Economic Health of Downtown Asheville**

Continuing Downtown’s economic success is a second key issue here. The economic vitality enjoyed by Asheville’s Downtown is what built it in the first place, what revitalized it in recent decades, and what will keep it alive in the years ahead. Historic preservation literally requires this economic vitality (no dollars, no maintenance) – and the symbiosis between the business community and historic buildings, as noted earlier, is considerable (the buildings bring the businesses alive, and vice versa). Thus, it is incumbent on all concerned about historic preservation to pay attention to economic conditions in the Downtown.

Asheville’s Downtown is moving rapidly into what could be called a fourth phase of revitalization and growth. The first three phases, over nearly four decades, can be characterized as (1) Startup (1977 – 1997); (2) Visible Success (1998 – 2008); and (3) Growth Consolidation and Planning (2009 – present). Here is what the 2009 Downtown Master Plan says about what we are calling the third phase:

Recent market and development trends have ushered in a new era: Downtown is no longer desperate for investment (as it was for much of the period from the Great Depression through the early 1990s); instead Downtown may be challenged by development. The new opportunity is to manage growth for community benefit. The economic downturn [that began in 2008] reduces urgency, but national trends and renewed interest in urban living point to the ongoing desirability of Downtown Asheville as a place to live, work, and visit. This is an occasion to consider new methods in managing growth, reviewing projects and land uses, and logically protecting key assets before large-scale investment resumes. Downtown deserves more robust development controls to protect its essential qualities while it also assures that project sponsor investment risks and burdens remain reasonable. (p. 19)

Call the third phase a quiet phase in the classic sense of a university’s capital campaign, where plans are laid and many goals are met behind the scenes with the cooperation of important donors before the fundraisers march forth to public view. Having accomplished much planning and implemented a number of recommendations from the DMP, Downtown is emerging into the fourth phase, “Much Growth.”

Meanwhile, many of the leaders from the first and second phases have retired or otherwise left the scene. The Downtown, therefore, is in danger of losing or discounting institutional memory and critical experience earned across nearly two generations. In this fourth phase, Ashevillians must re-learn to communicate values and re-commit to the planning and supportive partnerships that are critical to the city-wide cooperation that will be needed to grow Downtown as envisioned in the DMP. To mix our metaphors here, from academia to sports, what is needed is nimble teamwork.

Asheville possesses a considerable asset in its Downtown Master Plan. Though five years old, it is still a useful guide and applicable to current times. Moreover, it
established a deep sense of commitment among the many people who participated in the plan, especially those who served on the implementation task forces, which went to work with considerable enthusiasm toward the end of the DMP planning process. Once this Historic Preservation Master Plan is adopted, an assessment of progress on the DMP would help to identify critical next steps. Consider the following points for investigation during such status assessment:

- What steps in the DMP have been accomplished? If they do not conform to DMP recommendations, what conditions led to alterations in those recommendations during the implementation process? What is left to be accomplished?

- What have been the results of the task forces’ work, what unfinished tasks remain on their agendas, and how can those unfinished tasks be addressed? (For example, the historic preservation task force called for a historic preservation website “portal,” now a recommendation here in Chapters 3 and 8.)

- Looking back at the considerable teamwork needed to bring Asheville’s Downtown to its present level of high achievement, what are present needs and potential mechanisms for encouraging great collaboration in the coming years?

- Given specific changed conditions in the past five years, where does the DMP need tuning up and additional information? (For example, the DMP recommended updating the parking study.)

- What direction, resources, and partners are needed to accomplish the five small-area plans envisioned by the DMP?

Next steps that might be identified include forming a study committee to examine more closely how to address the DMP’s critical tasks of “downtown advocacy & coordination” and “clean & safe,” intended to support business development and retention. How are DMP recommendations being implemented, and what further support they need? Since the Business Improvement District (BID) as recommended by the DMP has not been implemented, what other options are possible to cultivate Downtown business growth?

Furthermore, status assessment should examine progress on the DMP’s recommendations for achieving additional housing in the Downtown, to enhance its livability and affordability. How can historic structures be adapted to support this goal? What other planning is needed to support city and private efforts to gain more housing in all parts of the Downtown as considered in the DMP?

**Strategy for Strengthening Downtown Economic Vitality**

Chapter 4 addresses the critical need to support, in every possible way, the economic incentives for the rehabilitation of historic structures in the Downtown (and elsewhere). Here, we simply recommend further planning and investigation targeting the special needs of the Downtown based on progress already made in implementing the Downtown Master Plan.
6.7 Evaluate progress on the Downtown Master Plan to identify critical next steps.

Historic Preservation in Other Commercial Areas

♦ Historic preservation is in good use in multiple forms in the other three commercial areas described in this chapter and we trust that historic preservation can be incorporated into other city policies and plans that affect other commercial areas. The following points document observations for long-term attention by the HRC and the city:

♦ Biltmore Village faces several pressing issues not easily addressed directly through historic preservation. In particular, the district needs additional planning to address continuing issues involving parking, through traffic, and bicycle and pedestrian access – despite such recent improvements as re-striping the parking. If Biltmore changes its policy of car-entry-only at its main entrance, entire traffic and pedestrian patterns will respond. River flooding and commercial expansion outside the district also may put additional pressure on the historic resources within the district. Finally, although a mid-century modern bank building on the edge of the district may be a mismatch within the overall style of the district, it should be evaluated for its architectural significance in terms of statewide context. The HRC should be prepared to deal with proposals for change to this structure as the banking industry continues to evolve. At this time, we recommend one strategy to address landscaping issues that arose during the management planning process:

6.8 Work with Biltmore Village merchants to restore the original historic Olmsted landscape/streetscape.

♦ The River District Redevelopment Commission may benefit from some of the recommendations for the Downtown Commission; the River Commissioners should observe evolving practice in the Downtown, especially to provide consistency in the development process. A walking tour guide to the district’s remaining historic buildings might deepen the public’s and owners’ appreciation for the district’s stories as well as its simple industrial buildings (see Chapter 8). The greatest impact this area may have on historic preservation is to help steer more growth to the South Slope in an effort to fill in the mile’s worth of distance between the Downtown and this area – an impact that can be addressed through the neighborhood planning described in Chapter 5. (Note that the DMP specifically identifies surrounding/intervening neighborhoods for historic preservation, including the area between Downtown and the River Arts District.)

♦ In West Asheville, historic preservation has been woven into community appreciation and conversation currently focused on a revision to local development and zoning via a new form-based code (see sidebar on page 52). Portions of the area may ultimately need actual application of historic preservation techniques, even after the code update – but this may be most effectively assessed for now through vigorous neighborhood planning as described in Chapter 5. Issues there also include figuring out ways to address the overhead wiring and poles afflicting the commercial district and watching out for parking and pedestrian access issues.

♦ Other commercial areas throughout Asheville need equal sympathy and public appreciation for historic resources. The reconnaissance survey recommended in Chapter 2 should focus first on these areas, in particular to help with setting priorities for more in-depth surveys of historic resources and for streetscape plans. Merrimon Avenue was specifically mentioned as an area of potential conflict and should be slated for early investigation in the implementation of a cultural landscape assessment.
Chapter 7

Understanding and Preserving Buncombe County’s Heritage

Introduction

Buncombe County has significant heritage resources and landscapes of its own while also providing a critical regional context for the City of Asheville. A significant portion of the county includes historic landscapes of considerable quality under the stewardship of owners who treasure their heritage. While there is some understanding that the county’s rural resources are both important and threatened – by sprawl, abandonment, demolition, and inappropriate changes, to name the most obvious – that awareness has not yielded concerted local action to deal with the threats.

In 2007, the county wrote a farm plan, Buncombe County Agricultural Development and Farmland Protection Plan (hereafter referred to as “the Farm Plan”). It was supported by a grant of $58,000 from the Asheville Merchants Association. The Farm Plan opens with this statement of need:

Buncombe County...holds a unique place in the economy and culture of Western North Carolina. Its urban hub, Asheville,...dominates the whole mountain region as center of transportation, markets, and services. It also enjoys some of the flattest topography between the Blue Ridge and the Smoky Mountains, which accounts for its early importance as an agricultural center and, ironically, now, for an urban sprawl that threatens to overwhelm what remains of its rural heritage....The Asheville Merchants Association, by [its grant...], has also recognized the contribution to our prosperity of agrarian landscapes that remain, fertile,
biologically diverse, uncluttered to the eye, and productive enough to support the people who work them.

The Historic Resources Commission of Asheville and Buncombe County is responsible for public policy affecting historic resources in the unincorporated areas of Buncombe County as described in Chapter 2. Thus the HRC’s efforts to educate the public, support surveys, and encourage stewardship of significant private property all pertain to Buncombe County as well as Asheville. The HRC with funding from the City of Asheville, Buncombe County, and the North Carolina Department of Cultural Resources completed an acclaimed survey of Buncombe County’s historic resources in 1978. One result of that survey was *Cabins & Castles*, a book republished by the HRC in 2008, which is still a popular seller in local bookstores.

A key strategy offered in this chapter is that, given the age of the county’s historic resources survey – nearly forty years – an update is overdue. Such a survey could incorporate volunteers, modern standards (beginning with cultural landscape overviews), and state-of-the-art technology. Once the county has up-to-date information in hand, it will be in a position to evaluate whether and how it wishes to address the needs of historic resources beyond the HRC.

**BACKGROUND**

The Farm Plan notes a number of factors eroding Buncombe County’s agricultural heritage: “The real estate market is the primary force eroding the position of agriculture in Buncombe [and...] many of the ‘challenges’ to preserving farmland are symptoms of this fact.” These challenges include the age of farmer-owners (58 was Buncombe’s average in 2007, slightly more than today’s national average of 55); the money involved and the difficulties of planning transitions among multiple heirs (making “liquidation the most efficient way to settle an estate”); and “conversion of farmland to other uses and the ongoing fragmentation of larger tracts of land, even in the areas where agricultural land use still predominates.” (p. 17)

Buncombe County maintains a voluntary program to preserve farmland as an economic base for agriculture. As delineated in the 2007 Farm Plan, the county’s methods include “purchase of development rights, ‘present use valuation’ that keeps property tax rates low, voluntary donation of easements in return for income tax benefits, establishment of Voluntary Agricultural Districts which carry certain ‘right to farm’ protections, various environmental programs such as Conservation Reserve designation and the certification of stream buffer zones, and zoning.” (pp. 20-21) The Farm Plan also includes “priorities for enhancing farming as a viable enterprise,” non-land-use-based methods of addressing the economic forces that underlie the challenge of maintaining farming.

The county’s choice to protect the agricultural community’s land base and economic activities only through voluntary means is congruent with choices made by many farming communities across the nation. Farmers, land owners, developers, and others involved in real estate often fear that regulatory action to protect farming as an economic activity will limit options for land use and therefore downgrade property values. It is not the purpose of this plan to comment on additional methods that might be available for protecting Buncombe County’s farmland and farms. Any such additional protection, however, would have the added benefit of encouraging continued use and evolution of the county’s rural cultural landscapes, historic structures included.
ISSUES, OPPORTUNITIES, AND RECOMMENDATIONS

Developing Improved Information about Buncombe County’s Historic Resources

The most urgent need in Buncombe County is to provide a sound basis for further decisions on how to provide additional investments, incentives, and protections in stewarding the county’s historic landscapes and structures. The outstanding, existing foundation that documents Asheville and Buncombe County’s history and historic resources has become outdated in the county. In order to strengthen efforts to advocate for and present the county’s history for enjoyment by current and future generations of residents and visitors alike, it is time to refresh existing information. (Chapter 3 discusses advocacy further; Chapter 8 discusses presentation of the county’s history to residents and visitors.)

Undertaking a survey supports Buncombe County’s well-known commitment to preserving agricultural lands as documented in the Farm Plan. As most of the historic resources in the county are related to its agricultural heritage, its efforts to protect farmland and develop economic opportunities for farmers are commendable for helping to keep the economic forces in play that produced and sustained this heritage. Information from the survey could assist in setting further priorities in planning for agricultural land protection and may even provide support for National Register nominations that could allow some commercial farm buildings to benefit from historic tax credits.

Strategies

Updating Buncombe County’s historic resources survey is a high priority overall in this plan. Such a strategy allows the HRC to devote time and attention to the needs of the county as a whole. Funding may be available through the Blue Ridge National Heritage Area’s matching grants program (which supports agricultural heritage as a major theme of the program).

The historic resources survey in Buncombe County that provided the basis for the information in Cabins & Castles was performed in 1977-78, making the information nearly forty years old. Although much site information may well remain valid, it is likely that a considerable number of structures have been lost. Plus, more buildings have become eligible for survey (becoming more than fifty years old since the last survey), and many structures may have been overlooked in an era when outbuildings were not always described. Moreover, the survey predated the development of a set of “best practices” recommended by the National Park Service (NPS) for describing rural cultural landscapes (see sidebar, next page). In the years since, new technologies have made it easier to assemble information across broad areas like Buncombe County – from Geographic Information Systems (GIS) mapping to more recent developments in surveying using special software and handheld equipment.
The newer technologies have the further benefit of providing great potential for making appropriate use of volunteers under professional guidance. Well-informed volunteers developed through surveys can provide additional helping hands for further public outreach in support of incorporating historic preservation into Buncombe County planning, policies, and investments.

In order to organize the large task of surveying Buncombe County, a cultural landscape reconnaissance of Buncombe County townships is recommended – this is a brief review of landscape patterns by professionals trained to employ NPS guidelines and other relevant methodologies selected in collaboration with the SHPO. A reconnaissance would enable an understanding of historic context and rural character across the county as it evolved in response to underlying historic and modern trends and help to set priorities for more in-depth historic resource surveys. Historic resource surveys should be undertaken over time, township by township, as funds become available; perhaps one or two such surveys might be packaged with the reconnaissance as pilot studies for a first-phase project. Townships will work well as survey units because they generally follow watershed boundaries, which in this mountainous terrain heavily influenced settlement patterns (a proposition that a county-wide reconnaissance can also test and refine).

Oral/video history interviews with Buncombe County elders and their families would supplement the survey work and increase the material available for follow-up public education and interpretive projects. Such interviews could include members of churches, rural community residents, farmers, and others with memories of earlier times (and of tales learned from their elders).

7.1 Undertake a cultural landscape reconnaissance of Buncombe County to provide a first level of study, including historic context, and establish the best ways to undertake a more in-depth series of historic resource surveys in phases.

7.2 Based on the reconnaissance, undertake segmented, phased surveys of county historic resources, making strategic and efficient use of volunteers.

7.3 Undertake oral/video history interviews to support the surveys and provide material for public education.

7.4 Use the surveys to identify and pursue additional candidate sites and buildings for National Register nominations, local landmark designations, and preservation easements.

7.5 Work with the present owner to designate the Bascom Lamar Lunsford House as a local historic landmark. (See photo at right.)

7.6 Use findings from surveys and interviews to develop educational programs for county residents.
7.7 Develop specialized tours in Buncombe County of sites and landscapes of historic, architectural, and agricultural interest (see Chapter 8 for more).

7.8 Designate a Buncombe County Planning Department liaison to the HRC.

7.9 Work with the County to establish a dedicated funding program.

Coordinating Historic Preservation with Agricultural Land Protection

Buncombe County’s efforts to protect agricultural landscapes could benefit from in-depth information developed from surveys conducted to identify the county’s rural heritage. This information could provide additional rationales for the use of local, state, and federal funds for the protection of farm and forest land.

To reinforce this benefit, it would be useful to pursue additional agricultural development planning by undertaking a new farm plan, including advisors drawn from among historic preservationists knowledgeable about the needs of rural landscapes. Asheville’s increasing enthusiasm for local foods has had a notable impact on farm enterprise, which could only benefit from additional economic and agricultural development planning. There is time now to plan a ten-year update to the current plan for issuance in 2017. There may be enough lead time to consider this project for Buncombe County’s annual work plan in 2015, which in turn would allow enough lead time to organize wide participation of county residents (and perhaps to complete several more township historic resource surveys after the recommended first-phase project described in the preceding section).

In addition, as further outlined in Chapter 8, efforts to develop tourism could contribute to the growth of heritage tourism and “agri-tourism” in the county as well as in the city.

Strategies

7.10 Incorporate survey findings into Buncombe County’s priorities for investment in agricultural land protection, as appropriate.

7.11 Update Buncombe County’s Farm Plan, An Agricultural Development and Farmland Protection Plan for Buncombe County.
Activities and Experiences

For Asheville, the activities of visiting a landmark/historic site, visiting a national park, hiking, and visiting a winery are much higher than the US norm.

Activities of Special Interest

Asheville’s main assets are why visitors come to Asheville.

CHAPTER 8

BUILDING PUBLIC APPRECIATION AND ENCOURAGING HERITAGE TOURISM

INTRODUCTION

Fostering publicly accessible, interpreted historic sites and programs about the region’s heritage is integral to Asheville’s and Buncombe County’s historic preservation program. Web-based programs such as the National Park Service’s Travel Itinerary developed in concert with the Historic Resources Commission highlight the significance of history and historic assets to the region’s character and identity (see sidebar, page 76). A robust, celebratory program to increase public awareness of Asheville’s history helps grow the base of support for the historic preservation program as a whole.

This chapter outlines how partners in history, tourism, and the arts can better present Asheville’s and Buncombe County’s stories through coordinated interpretive programming, including interpretive placemaking through the arts. Working together, these partners can assure that heritage is seen as a core component of Asheville’s and Buncombe County’s identity, quality of life, and authentic visitor experience.

Asheville has promoted its heritage in a general sense and visitors clearly appreciate Asheville’s and the region’s historic and architectural qualities – as measured by the success of touring companies as well as visitor surveys (of which more below). Moreover, Biltmore is one of the nation’s premier historic attractions.

The Asheville Urban Trail interprets the city’s heritage with artistic brio. The plaque accompanying this installation, “Past and Promise,” reads, “Until electricity was introduced in the late 1880s, gas and kerosene lamps provided lighting in Public Square – now Pack Square. Horse-head fountains, fed from a reservoir on Beaucatcher Mountain, were affixed to lampposts at the east and west ends of the square. The bronze figure, Childhood, represents the promise of Asheville’s future. (Placed in honor of Elaine McPherson – artist, poet, and tailor – who lived at 19½ Biltmore Avenue and who played on Pack Square as a young child.) (Photos courtesy Heritage Strategies, LLC)
Best Practices for Cultural Heritage Tourism

Partners in Tourism is a coalition of national associations and federal agencies working to build a common agenda for cultural heritage tourism and advance the role of culture and heritage in national, state, and local travel and tourism. The group provides practical guidance and success stories for cultural heritage tourism, including basic steps for improving the cultural heritage tourism of any community: assess potential; plan and organize; prepare for visitors; protect and manage cultural, historic and natural resources; and market for success.

Principles for cultural heritage tourism endorsed by this group are:

Collaborate: Much more can be accomplished by working together than by working alone. Successful cultural heritage tourism programs bring together partners who may not have worked together in the past.

Find the Fit: Balancing the needs of residents and visitors is important to ensure that cultural heritage tourism benefits everyone. It is important to understand the kind and amount of tourism that your community can handle.

Make Sites and Programs Come Alive: Competition for time is fierce. To attract visitors, you must be sure that the destination is worth the drive.

Of the city’s more than nine million visitors each year (day and overnight), one million visit Biltmore.

The region, however, has yet to take full advantage of making history and historic preservation central to its appeal as a visitor destination. Individual sites operate generally on their own, not having reached the point in their evolution and capacity-building that they are working to build larger shared audiences and a common identity.

Fortunately, the region enjoys several key assets in addressing this challenge. For one, the Blue Ridge National Heritage Area holds promise for encouraging the greater collaboration and cross-marketing that would weave a stronger interpretive and historic presence for the entire region (see sidebar, page 78). In addition, the Urban Trail provides an outstanding foundation for a new generation of efforts to celebrate both history and the arts (see sidebar, page 77). Moreover, recent establishment of the African American Heritage Commission is added recognition of the importance of celebrating community heritage. Finally, the region enjoys a number of high-quality individual sites, as discussed further below.

Key strategies described in this chapter address building a more substantial, collaborative presentation of Asheville’s stories, by enlisting interpretive attractions and others who hold keys to Asheville’s stories and hidden assets, plus the arts community and the tourism system.

BACKGROUND

Heritage tourism contributes to Asheville’s and Buncombe County’s economic vitality as a segment of tourism as a whole. The National Trust for Historic Preservation pioneered investigation into “cultural heritage tourism” in the late 1980s. The trust defines this kind of tourism as “traveling to experience the places and activities that authentically represent the stories and people of the past and present. It includes historic, cultural and natural resources.” The national market remains large and growing. In 2012, Mandala Research estimated that the market would grow to 41.6 million travelers in 2013 from a 2009 high of 33.9 million.

Interpretation informs residents and visitors about Asheville’s and Buncombe County’s history, character, and traditions. Through stories, visual and performing arts, events and festivals, and other creative means, interpretation provides meaning and creates awareness about local history and relates themes and stories to authentic places. Through interpretation, a wide variety of audiences can learn about Asheville’s and Buncombe County’s special places and develop awareness and respect for the city’s historic assets and community-building efforts over time.

Interpretation and heritage tourism complement one another. While the economic goals associated with heritage tourism are focused primarily upon visitors, the interpretive presentation created through a heritage tourism initiative can also have a significant impact upon residents, helping to build community pride and long-term support for historic preservation programs and values.

Historic preservation can benefit greatly from teaming with tourism, as both must work to enhance and promote a place’s image and identity to achieve their aims. Moreover, like historic preservation, tourism seeks to make a positive contribution to a region’s overall economic picture. An engaging interpretive program, a vital historic downtown center, residents who value their city’s character, a place that visitors like to be – these are positive factors in attracting new businesses, helping existing businesses grow, and increasing the number of jobs overall within the region. Thus, both tourism and historic preservation are linked to one another and the overall health of a region.

Heritage travelers are among the most desirable leisure visitors – they tend to stay longer and spend more. This means fewer visitors are needed for the same level of
desired economic impact from tourism. In fact, according to Mandala Research, “the cultural and heritage traveler is the most productive travel segment of the travel industry, generating over 90% of the economic benefit of all U.S. leisure travelers.”

Heritage visitors want a complete experience, expect high quality, and like to linger in the restaurants and other places where residents tend to gather. They want to experience authentic places. They want to learn about a place and combine their visits to interpretive sites with interesting dining and shopping opportunities in historic commercial areas. In one notable statistic among many studies of heritage tourism, Mandala Research found that 65 percent of these travelers say they seek experiences where the “destination, its buildings and surroundings have retained their historic character.”

EXISTING CONDITIONS – PRESENTING STORIES FROM ASHEVILLE’S AND BUNCOMBE COUNTY’S HERITAGE

The eclectic listings offered by the Asheville/Buncombe County tourism website, ExploreAsheville.com, include a total of fifty-one sites – from the Asheville Art Museum to the Zebulon Vance Birthplace State Historic Site. On this list are thirteen museums or cultural centers and eleven historic sites and districts listed as attractions in Asheville, resulting in total of twenty (accounting for some overlap) historic sites and interpretive programs where visitors can learn about historic resources and stories in Asheville and the region. However, this does not include several impressive non-museum/non-site-based interpretive programs such as the Moog Music factory tour and the “Asheville Architecture and History Walk” (http://www.asheville-mountain-magic.com/asheville-architecture.html), at least six different tour companies, and the Asheville Urban Trail and the programs of the Blue Ridge National Heritage Area, both described in nearby sidebars. In addition, the National Register itinerary developed for Asheville highlights still more historic sites, as also described in a sidebar.

EXISTING CONDITIONS – HERITAGE TOURISM

Historic buildings are a fundamental factor in the quality of the visitor experience in Asheville. Asheville’s and Buncombe County’s tourism has always involved the environment, and the cityscape is a critical aspect of that environment, for all that the surrounding mountains exert their special appeal. It is, in fact, the juxtaposition of splendid buildings with spectacular mountain views that makes Asheville’s

(Continued from page 70)

Focus on Quality and Authenticity: Quality is an essential ingredient for all cultural heritage tourism, and authenticity is critical whenever heritage or history is involved.

Preserve and Protect: A community’s cultural, historic, and natural resources are valuable and often irreplaceable.

architecture so appealing. The constraint of topography has shaped that cityscape in exciting ways, virtually unique among American cities. (Black, p. 21)

Visitors, both those staying overnight and those visiting for the day (who are traveling more than fifty miles to reach Asheville), tell us that the city’s historic sites and landmarks are one of the top two reasons they visit (see tables on pages 70 and 74-75). The sidebar on page 75 offers other details of visitors’ interests, several of which involve heritage experiences.

As work on this plan came to a close, the City of Asheville created a new program for infrastructure planning and investment in “innovation districts.” The program offers a new way of devoting city resources to efforts that will help to grow tourism along with improving conditions for business investment.

The Buncombe County Tourism Development Authority

Asheville and Buncombe County jointly benefit from a tourism system with the funds to pay not only for extensive, targeted marketing but also for the in-depth research that supports smart marketing. It also maintains a culture of open discussion of plans and performance, thereby enlisting the community at large in its efforts. This kind of system did not come about by accident, and it has long been in place, emphasizing excellence and quietly building a collaborative tourism powerhouse.

As noted on the BCTDA’s website, “The Buncombe County Tourism Development Authority (BCTDA) is a quasi-governmental entity created by the room tax legislation first passed in 1983. The BCTDA oversees tourism marketing, sales and product development efforts and the expenditure of the county’s four percent occupancy tax revenues [on lodging properties with five or more units]... The board contracts with the Convention & Visitors Bureau (CVB), a department of the Chamber of Commerce, as well as advertising agencies to implement marketing and sales strategies. The CVB promotes the destination through out-of-market advertising and other marketing initiatives, resulting in approximately 3.13 million
overnight leisure visitors each year.” The annual economic output of tourism grew 400 percent in Buncombe County before the end of the program’s second decade and now totals more than $2 billion.

As the BCTDA itself emphasizes, “tourism builds community”: The more than $2 billion generated by tourism in the Buncombe County economy “go beyond the hospitality sector, reaching industries across our region and impacting the quality of our school systems...More than 26,000 jobs are supported through the hospitality industry in Buncombe County.”

Moreover, the investment in tourism product development yields attractions and experiences enjoyed by residents as well. A critical shift occurred in 2001, when the North Carolina legislature passed the Tourism Product Development Fund (TPDF) bill which increased the room tax by 1% (for a total of 4%) and dedicated the proceeds from the additional 1% to be used for capital expenditures for new tourism products that will generate substantial new room nights in Buncombe County. The BCTDA has since worked through the TPDF to award more than $13.5 million to 14 community projects. The extra one percent occupancy tax generates approximately $1.8 million for the TPDF per year.

**ISSUES AND OPPORTUNITIES FOR INTERPRETATION**

**Approach**

Currently, while Asheville has a valuable and large core set of resources, as described above, they could be linked more effectively. The tourism marketers are eager for more and better experiences to offer visitors, and the interpretive attractions are eager for larger audiences. Those who hold keys to Asheville’s stories and hidden assets, however, must take the lead. Only the attractions themselves are best positioned to develop ways to collaborate and offer a better experience to visitors seeking to enjoy and learn about Asheville’s and Buncombe County’s heritage.

Involving the BCTDA and CVB in addressing the strategies discussed below is critical. Both tourism and interpretation need a keen awareness of audiences’
Asheville and Buncombe County Historic Preservation Master Plan

Assessment

The success of heritage tourism in Asheville overall is somewhat uneven. On the one hand, Biltmore alone draws one million visitors a year, offering both a world-class historic resource and a compelling visitor experience. Asheville’s Urban Trail is unique, reflecting both stories and the region’s artistic experience. The Downtown, River Arts, and Biltmore Village districts offer favorable impressions to which historic resources contribute considerably. Curious visitors can already find multiple ways to experience portions of the region’s history more deeply.

On the other hand, there is a sense that overall interpretation is “canned” (in the words of one commentator participating in the planning process) and the visitor and citizen both see it as dusty and repetitive. For those sites and programs that have reached a level of success individually, their opportunity now is to work together to create fresh presentations that link to each others’ stories. By collaborating, they can earn greater visitor recognition and accomplish stronger messages and greater

Characteristics and interests. Thanks to considerable strategic investment, the tourism industry of Buncombe County is deeply knowledgeable about the region’s visitors. Moreover, the BCTDA and CVB recently stepped in to address a critical element of the visitor experience, wayfinding in downtown Asheville. With the interpretive and preservation community leading the way in creating a next-level heritage presentation, the BCTDA and CVB will be valuable partners indeed. Moreover, they may benefit directly as well, in finding new ways to keep their current branding effort fresh – planning with this need in mind could serve all parties well.

Charts, above and at right: Day visitors (those traveling from more than fifty miles away) have slightly different patterns from overnight visitors; compare these charts to those found on page 70. (Source: http://www.ashevillecvb.com/wp-content/uploads/2013/07/Asheville-2012-Visitor-Final-Report-v.3.pdf, pages 57, 59.)

*Caution: Low Base Size
brand alignment respecting heritage and historic resources and thereby gain even stronger participation by entities marketing Asheville.

Building a next-level version of Asheville’s collective interpretive presentation needs interpretive attractions’ focus and commitment, through a carefully developed plan for enlarging the visitor’s experience of Asheville and its interpretive possibilities. Such a plan should involve both tourism and arts leaders along with history and historic preservation leaders. It should pursue a vibrant, unique vision for Asheville’s future as a place where a deep appreciation of heritage is integral to its attraction. The “best practices” methodology for such planning already exists – see sidebar on page 70.

Such a plan could go far in helping heritage resources gain both “market share” among visitors and essential local support. It would identify shared themes; opportunities for cross-marketing and building other linkages among various sites; and suggest ways to pay more attention to collaborative product development, messaging, front-line staff training, and more social/digital media applications. The plan should also consider how to incorporate and display the community’s commitments to historic preservation, and how to provide public enjoyment and celebrations as part of encouraging greater public appreciation of the region’s historic resources. The interpretive and visitor experience plan should identify ways to enhance existing interpretive attractions and suggest new ones as appropriate.

A plan for visitor experience and interpretation should recognize that Asheville’s unique character as a tourist destination relies on the arts. The Urban Trail is an ideal example of the marriage of the arts and community interpretation. In all planning and program development relating to interpretation, in order to continue

Visitors’ Primary Reasons for Visiting Asheville

- Biltmore Estate (29%)
- Mountains/Scenery (22%)
- Blue Ridge Parkway (9%)
- Downtown Asheville (5%)
- Festival/Event (3%)
- Grove Park Inn (2%)
- Outdoor Activities (3%)
- Arts and Crafts (2%)
- Culinary Experience (1%)
- Music/Perform Arts (1%)
- Microbrewery Scene (>1%)
- Amateur Sports (>1%)
building Asheville’s unique identity and experience, the relationship between community interpretation and the arts must be cultivated.

Heritage could also be engaged to a greater degree in public investment and placemaking efforts, particularly in downtown Asheville. Visitors can easily wander around the downtown without fully appreciating that the graceful and eclectic physical environment they are experiencing is a product of a long history and thoughtful community and private involvement. Specific recommendations below amplify on emphasizing “telling the story of our heritage” as investments are made to support tourism, the arts, placemaking, and the environment, through the Tourism Product Development Fund or otherwise (e.g., interpretation accompanying greenway development). In particular, now that Asheville’s kiosks and other basic elements of the wayfinding plan have been installed, additional improvements could be a next phase in building Asheville’s wayfinding system and/or be considered as part of the interpretive presentation.

Largely overlooked in the lists provided by ExploreAsheville.com, the National Register Travel Itinerary, and others are the City Building and Buncombe County’s courthouse. Recent improvements both attest to the city’s and the county’s considerable commitment to downtown preservation – and both have interiors worthy of visitor interest. In particular, the City Building’s observation deck could be made more accessible, and its carillon could be revived as an ornament to the downtown music and festival scene (special policies are needed to address concerns about the type of music and access by volunteers, and an organization should be designated to manage this feature).

Context studies of particularly interesting topics for the region are recommended in Chapter 2 to enable surveyors to understand the significance of individual buildings within larger themes. Possible themes include agriculture, forestry, the arts, sanitariums, city-building, landscape architecture, the American Indian landscape, and early European settlement. Such studies also support interpretive initiatives, by helping to identify ways to link existing interpretive and historic sites, priorities for developing other sites, and programs to link multiple sites in more comprehensible ways.

Buncombe County can also contribute to efforts to create a larger interpretive experience. As the county and the HRC and other partners pursue recommendations discussed in Chapter 7 to survey the county’s cultural landscapes and rural districts, they will be building opportunities for educating visitors as well as residents about the region’s history and heritage resources. Either one by one, or as part of the interpretive and visitor experience plan, the county could consider interpretive improvements on scenic byways (see sidebar, page 64), special tours based on historic resource surveys and agri-tourism opportunities identified in planning support for the farm economy, and encouraging other linkages among county historic sites as opportunities arise (e.g., through bicycle touring).

Strategies appear below the next section, a discussion of heritage issues, because heritage tourism and interpretation are so closely related in this plan.

**ISSUES AND OPPORTUNITIES FOR HERITAGE TOURISM**

**Assessment**

The BCTDA’s and CVB’s enthusiasm for Asheville’s historic architecture is apparent on ExploreAsheville.com. And it is clear that history and heritage are a part of the Asheville experience that visitors expect, as demonstrated by the tables shown on pages 70 and 74-75. Moreover, the BCTDA and CVB have diligently pursued such recognitions as “Distinctive Destination” designed to appeal to heritage travelers. Finally, while the word “historic” is not explicit in the BCTDA’s
vision statement (see sidebar on page 72), maintaining Asheville’s “unique, authentic and environmental charm” would surely require “authenticity” to include historic character.

Heritage and history are hardly mentioned in current “brand alignment” statements about marketing plans, however. The BCTDA’s annual plan for advertising calls for targeting “all audiences who fit the psychographic profile of a Traveler, defined as: People to whom travel is essential, who view travel as an investment in their development, who look to travel as more about enrichment than entertainment, who have a fearless curiosity about new experiences.” The annual plan for public relations (outreach to those who influence travel, without purchase of advertising) calls for targeting “emerging and existing niche markets, especially culinary, budget, the arts and international travel, while maintaining emphasis on primary travel motivators (i.e., the mountains, Biltmore).”

The CVB’s travel blog features this description of things to enjoy about Asheville: “Asheville North Carolina is a vibrant city with a bohemian spirit. Known for its culinary cool, stunning panoramic vistas, and a thriving artistic community, you’ll find yourself immersed in an unmistakable mountain vibe. From the burgeoning beer scene to an array of outdoor activities, follow along to discover what we love most about Asheville.”

The challenge is this: Unless heritage resources are explicitly recognized locally as having critical value to tourism, one of the region’s most lively economic sectors, they may not receive the due consideration they need from officials, owners, and residents for local protection and investment. And unless they continue to receive that local protection and investment, some may not remain (or grow into) effective contributors to the overall visitor experience.

Resolving this challenge is not the tourism marketers’ responsibility. Thus, the preceding section on interpretation assessment identifies the BCDTA and CVB as critical supporting players for recommendations here, rather than the leaders. Their specific mission is to help the product appear fresh to an outside audience seeking novelty and unique experiences. They must work diligently to be responsive to changing tastes and patterns. They may encourage their stakeholders to develop more tourism experiences (through the Tourism Product Development Fund’s matching grants for capital-intensive projects or by making web pages on the Asheville Urban Trail.

According to ExploreAsheville.com, “the Asheville Urban Trail has often been called Asheville’s ‘museum without walls.’ Started by a small group of citizens interested in helping revitalize downtown, the Urban Trail consists of thirty stations of bronze sculpture around downtown. Each station has a plaque illuminating some of the very interesting history of downtown’s development and the various notable people who once lived here. Mostly local artists helped to create the whimsical bronze sculptures and other art works that are found at each station. The tour is a 1.7-mile walk that begins and ends at Pack Place and takes about two hours to complete in its entirety.”

Photo: The public square has been a central feature of Asheville since the town’s creation in 1797. This sculpture at the foot of the Vance Monument on Pack Square commemorates the drovers from Tennessee and Kentucky who moved herds of cattle, sheep, hogs, and turkeys through Asheville to South Carolina’s population centers before the railroad arrived in 1880. (Photo courtesy Heritage Strategies, LLC)
Blue Ridge National Heritage Area

Asheville and Buncombe County are located within one of the nation’s forty-nine National Heritage Areas, the Blue Ridge National Heritage Area in Western North Carolina. It was designated by Congress and the President in 2003 “in recognition of the unique character, culture, and natural beauty of the Blue Ridge Mountains and Foothills in Western North Carolina.” Threaded by the Blue Ridge Parkway, a unit of the National Park System, the area includes twenty-five counties and tribal lands of the Eastern Band of the Cherokee Nation.

The heritage area’s managing entity is the Blue Ridge National Heritage Area Partnership, which stewards the federal funds that support the designation, builds partnerships in the region, attracts matching funds, and implements projects. The National Park Service is the federal (Continued on page 79)

Funding

Funding for a collaborative interpretive and visitor experience plan may be available from the federally funded Blue Ridge National Heritage Area and state-level arts and humanities funders. It will be critical for stakeholders to be united in seeking this funding, and to find local support from public and private donors and agencies. A first step in building such unity and exploring funding is for the stakeholders to meet, assess their needs and opportunities, and build a collective vision for why this approach helps them to meet their individual needs.

Strategies for Interpretation and Heritage Tourism

8.1 Work with Buncombe County and other industry partners to develop a comprehensive interpretive and visitor experience plan. This may also be done in association with planning and implementation of infrastructure improvements for City’s innovation districts.

8.2 Undertake historical context studies to support interpretation (and surveys). (Repeated in Chapter 2)

8.3 Invest in Asheville’s story. In the interpretive and visitor experience plan, identify capital projects and other programs for future public and public/private investment. Include consideration of “telling the story of our heritage” as investments are made to support tourism, the arts, placemaking, and the environment.

8.3A Invest in the Urban Trail. Focus on the next-generation needs of the Urban Trail. Evaluate current use. Address long-term maintenance. Consider additional installations to support themes and activities identified in the interpretive and visitor experience plan. Consider renaming (contest) to focus visitors’ attention on the trail’s creative story-telling approach to Asheville’s arts and heritage.

8.3B Create more walking and driving tours based on the interpretive and visitor experience plan.
8.3C Create a “Neighborhood Trail” as a companion experience to the “Urban Trail.” Engage neighborhoods in an arts-based placemaking endeavor, perhaps as a part of the neighborhood planning described in Chapter 3.

8.3D Implement the Asheville wayfinding system’s markers for recognized Asheville historic districts or other markers as appropriate, especially in the downtown Asheville National Register historic district. (Repeated from Chapters 2, 3, and 6)

8.3E Engage in other placemaking activities to illuminate Asheville’s heritage. Consider plaques or interpretive markers identifying National Register contributing properties, local landmarks and historic districts, designed to express Asheville’s unique qualities and experience.

8.3F Establish a partnership that would meet periodically to promote networking of organizations whose work relates to history and preservation. The partnership could coordinate funding opportunities, plan periodic events such as a history roundtable or create a web portal for easy access to heritage organizations and projects in the region. (Repeated in Chapter 3)

This simple and relatively inexpensive interpretive plaque was developed by the Montana Historical Society (the state’s historic preservation office) and is made available to willing property owners in National Register historic districts across the state. Numerous examples are enjoyed by visitors to Butte, a copper mining town in western Montana. (Photo courtesy Heritage Strategies, LLC)
**IMPLEMENTATION**

The following tables provide a summary of strategies explained in Chapters 2 – 8, keyed to pages in the text. They are accompanied by indications of parties expected to be involved in their implementation and an indication regarding additional resources required for implementation. It is anticipated that the first party listed will take the lead on the proposed strategy. The strategies will be tied to the two year work program adopted by the City, with the very highest priorities to be addressed in the first two year phase, followed by items designated as high and then medium. The work program will be assessed and updated annually and will continue to use this plan as a framework to prioritize work as time and resources permit.

Washington, DC: Environmental Security Technology Certification Program, Office of the Deputy Undersecretary of Defense for Installations and the Environment, April 2013. See http://www.achp.gov/docs/DoD%20Cost%20Benefit%20Report.pdf; as the result of this study the Department of Defense (DoD) – the world’s largest property owner – is in the process of emphasizing the re-use of older buildings as its bases are modernized; see also other reports found at http://www.achp.gov/sustainabilitylinks.html.

Preservation North Carolina. Various useful web page were accessed as follows: http://www.presnc.org/Preservation-Answers/Tax-Credits-Economic-Impact; http://www.presnc.org/Preservation-Answers/Tax-Credits

APPENDIX A – SURVEYS COMPLETED IN ASHEVILLE AND BUNCOMBE COUNTY, NC

- 1977-78: Comprehensive architectural survey of Buncombe County by Doug Swaim, leading to 1980 publication of Cabins & Castles: The History and Architecture of Buncombe County, North Carolina (Asheville, NC: Historic Resources Commission of Asheville and Buncombe County and the North Carolina Division of Archives and History, 1981, 2008 reprint). Still a popular resource, this well-documented book includes 646 entries (including streets and historic districts, so there are many more structures involved) and many photos.

- 1977: Survey and listing of the Albemarle Park Historic District in the National Register of Historic Places.

- 1983: Survey and listing of the Chestnut Hill Historic District in the National Register.

- 1990: Survey and listing of the Kimberly Amendment to the Grove Park Historic District in the National Register.

- 1991: Richard and Jane Mathews, survey of The Manor and Cottages, further documenting Asheville’s Historic Albemarle Park District.

- 1993: Harry Weiss and Davyd Foard Hood, survey of the Hillside-Mount Clare area in response to NCDOT’s proposed improvements along Broadway north of I-240, recording more than 400 principal resources.

- 1998: Liz Claud conducted a survey (sponsored by the HRC) documenting more than 1,600 properties in areas of north Asheville, West Asheville, and the Shiloh neighborhood.

- 2004: Survey and listing of the Riverside Industrial Historic District in the National Register.

- 2007: Acme Preservation Services. Asheville Survey Update: Phase I Summary Report (report to the City of Asheville, completed in May of 2011). This most recent survey included an assessment of buildings previously surveyed and made sure to include secondary structures, many of which were overlooked previously. More than 4,000 previously recorded resources were studied, “representing

\[1\] Surveyed areas (and number of entries): Asheville, Central (62); Asheville, Biltmore Village; Asheville, Downtown Historic District; Asheville, East (37); Asheville, Montford; Asheville, North (97); Asheville, South (5); Asheville, West (21); Asheville Township (24); Avery's Creek (5); Biltmore Estate (); Biltmore Forest (20); Black Mountain (36); Broad River (7); Fairview (33); Flat Creek (22); French Broad (19); Ivy (41); Leicester (57); Limestone (12); Lower Hominy (12); Reems Creek (52); Sandy Mush (27); Swannanoa (28); and Upper Hominy (26).
the cumulative recording of properties over the past forty years” (p. 10), and a searchable, state-of-the-art database was compiled. The survey resulted in a total of 4,079 records, expanding from the 1,760 records provided by the NC Division of Cultural Resources from its years of files. “Searching the database reveals that 239 previously recorded resources have since been demolished. The percentage of demolished properties is far less than has been seen in other recent county survey updates in North Carolina....Forty-two properties were categorized as substantially deteriorated and more than 1,000 were considered to be substantially altered. The number of properties categorized as rehabilitated was 629 and more than 2,450 properties were classified as unchanged [although this may be high due to uncertainty of preceding photographic records].” (p. 10) The data from this survey are currently being incorporated into the city’s standard geographic information systems (GIS) database, which will make it searchable for developers and property owners seeking information about their historic properties.

- 2008: Survey and listing of the Norwood Park and Proximity Park Historic Districts in the National Register.

- 2012 Acme Preservation Services. Asheville Survey Update: Phase II Summary Report (report to the City of Asheville, completed in February of 2012). This project “added 400 new properties to the comprehensive inventory of historic architectural resources within the city limits of Asheville. The newly surveyed resources in Phase II have not been previously recorded in State Historic Preservation Office survey site files and typically date from before 1960. Following the completion of Phase I (see bullet above re work in the year 2007), APS conferred with the City and State Historic Preservation Office to identify the resources and areas of the city to be included in the Phase II survey” (p. 3); available funding limited this survey to roughly half of the sites recommended for top-priority review, using the following criteria (p. 5):

  1. Properties and/or neighborhoods with intensive HRC activity or public interest (i.e., Biltmore Village and Montford/Montford Hills)

  2. Directly threatened properties and/or neighborhoods

  3. Principal development corridors (e.g. Merrimon Avenue, Brevard Road, etc.)

  4. Other corridors that may not qualify as potential historic districts and are not likely to be surveyed collectively.

  5. Potential National Register-eligible properties and/or districts.
APPENDIX B Secretary of the Interior’s Standards for the Treatment of Historic Properties

Standards for Rehabilitation

STANDARD 1 – A property will be used as it was historically or be given a new use that requires minimal change to its distinctive materials, features, spaces, and spatial relationships.

STANDARD 2

The historic character of a property will be retained and preserved. The removal of distinctive materials or alteration of features, spaces, and spatial relationships that characterize a property will be avoided.

STANDARD 3

Each property will be recognized as a physical record of its time, place, and use. Changes that create a false sense of historical development, such as adding conjectural features or elements from other historic properties, will not be undertaken.

STANDARD 4

Changes to a property that have acquired historic significance in their own right will be retained and preserved.

STANDARD 5 – Distinctive materials, features, finishes, and construction techniques or examples of craftsmanship that characterize a property will be preserved.

STANDARD 6

Deteriorated historic features will be repaired rather than replaced. Where the severity of deterioration requires replacement of a distinctive feature, the new feature will match the old in design, color, texture, and, where possible, materials. Replacement of missing features will be substantiated by documentary and physical evidence.

STANDARD 7 – Chemical or physical treatments, if appropriate, will be undertaken using the gentlest means possible. Treatments that cause damage to historic materials will not be used.

STANDARD 8 – Archeological resources will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken.

STANDARD 9 – New additions, exterior alterations, or related new construction will not destroy historic materials, features, and spatial relationships that characterize the property. The new work shall be differentiated from the old and will be compatible with the historic materials, features, size, scale and proportion, and massing to protect the integrity of the property and its environment.

STANDARD 10 – New additions and adjacent or related new construction will be undertaken in such a manner that, if removed in the future, the essential form and integrity of the historic property and its environment would be unimpaired.
